Study on the Mechanism of Pre-Alert System for Epidemic Prevention and Control in China: The Implication of the Pre-Alert System Failure of COVID-19

Hua Sheng and other authors

In response to the Novel Coronavirus Pneumonia, the alert mechanism has failed again, which shows the dysfunction of China's major epidemic prevention and control mechanisms. This paper analyzes the governance structure of the national infectious disease network reporting system at the core of the public health defense system by combing the infectious disease prevention and pre-alert mechanism in China. The reason for this is incentives are not compatible due to improper management structure. By constructing a central-local two-level model including multiple impact factors such as the probability of an outbreak, externalities (additional or loss), administrative punishment by the local government, and the exogenous legal environment to prove the additional negative factors. The result shows the greater the externalities and administrative penalties, the more the local government's administrative power should be centralized and the vertical management model should be adopted; while the clearer legal responsibility and the greater the penalties, the more appropriate the hierarchical management model is. At the same time, it is further pointed out that the low probability of outbreaks will to some extent passivate the effect of legal punishment. Finally, based on this, a number of policy suggestions such as changing the existing hierarchical management model to a vertical management model are proposed, with a view to providing some theoretical support and reference for improving the organizational structure and the major epidemic prevention and control mechanism.

The Development Paradox and the Characteristic Problems of Development Economics

Fan Gang

This paper attempts to redefine the research object of development economics based on the emergence of new facts, and explain the relationship between development economy and economic growth theory that has not been clearly stated. Economic growth theory is a general theory, which explains what elements and stages all economies need to go through in order to grow. Development economics is a kind of special theory and studies the paradox of convergence. Under the conditions of the growth factor structure backwardness and the market being occupied by the developed countries and multinational companies with strong competitiveness, backward countries have to grow faster than the developed countries. Thus, the author puts forward the concept of development factors and analyzes

《管理世界》关于开设"深入学习贯彻十九届四中全会精神"栏目并组织召开专题学术研讨会的启事

为深入学习贯彻党的十九届四中全会精神,本刊决定开设"深入学习贯彻十九届四中全会精神"栏目,并组织召 开专题学术研讨会。

一、公开征集论文。

围绕"坚持和完善中国特色社会主义制度、推进国家治理体系和治理能力现代化"专题,征集经济领域和管理领域的政策研究和学术研究论文。征文投稿请登录《管理世界》网站(www.mwm.net.cn),在线投稿"深入学习贯彻党的十九届四中全会精神"栏目。截稿日期:2020年10月31日。
