CONTENTS

Fluid Mechanics and Flight Mechanics

Control strategies for aircraft airframe noise reduction Y. Li, X. Wang and D. Zhang	249
Impact of gravitation on gaseous pollutant source identification L. Pang, Y. Zhang, H. Qu, T. Hu and J. Zhao.....	261
Plume aerodynamic effects of cushion engine in lunar landing B. He, X. He, M. Zhang and G. Cai.....	269
Research on multi-fidelity aerodynamic optimization methods L. Huang, Z. Gao and D. Zhang.....	279
Investigation of thermal protection system by forward-facing cavity and opposing jet combinato- rial configuration H. Lu and W. Liu.....	287
Measurements of heat transfer and pressure in a trailing edge cavity of a turbine blade H. Wu, Y. Liu and G. Xu	294
Robust design of NLF airfoils J. Li, Z. Gao, J. Huang and K. Zhao.....	309
Design and simulation of ex-range gliding wing of high altitude air-launched autonomous un- derwater vehicles based on SIMULINK C. Pan and Y. Guo	319
A new simpler rotation/curvature correction method for Spalart – Allmaras turbulence model Q. Zhang and Y. Yang	326

Solid Mechanics and Vehicle Conceptual Design

Aircraft vulnerability modeling and computation methods based on product structure and CATIA J. Li, W. Yang, Y. Zhang, Y. Pei, Y. Ren and W. Wang	334
Reliability design optimization of composite structures based on PSO together with FEA J. Chen, Y. Tang, R. Ge, Q. An and X. Guo.....	343
Independent modal variable structure fuzzy active vibration control of thin plates laminated with photostrictive actuators R. He and S. Zheng.....	350

Electronics and Control

Coordinated adaptive beamformer over distributed antenna network D. Liu, S. Lu, J. Sun and J. Wang	357
Performability analysis of avionics system with multilayer HM/FM using stochastic Petri nets J. Wan, X. Xiang, X. Bai, C. Lin, X. Kong and J. Li	363
Receiver-channel based adaptive blind equalization approach for GPS dynamic multipath miti- gation Y. Zhao, X. Xue and T. Zhang	378

Novel approach of crater detection by crater candidate region selection and matrix-pattern-oriented least squares support vector machine	
M. Ding, Y. Cao and Q. Wu	385
Dynamic infrared scene simulation using grayscale modulation of digital micro-mirror device	
K. Zhang, Y. Huang, J. Yan and L. Sun	394
Direct trajectory optimization based on a mapped Chebyshev pseudospectral method	
X. Guo and M. Zhu	401
Graph-tree-based software control flow checking for COTS processors on pico-satellites	
M. Yang, H. Wang, Y. Zheng and Z. Jin.....	413
Robust optimization of aircraft weapon delivery trajectory using probability collectives and meta-modeling	
N. Wang, L. Shen, H. Liu, J. Chen and T. Hu.....	423
Fast approximate maximum likelihood period estimation from incomplete timing data	
H. Ye, Z. Liu and W. Jiang.....	435
Comparison of strapdown inertial navigation algorithm based on rotation vector and dual quaternion	
Z. Wang, X. Chen and Q. Zeng	442
Interlaced optimal-REQUEST and unscented Kalman filtering for attitude determination	
W. Quan, L. Xu, H. Zhang and J. Fang	449
Environmental stress level evaluation approach based on physical model and interval grey association degree	
G. Deng, J. Qiu, G. Liu and K. Lv.....	456
Passive inter-modulation scattering analysis of reflector considering contact nonlinearity	
J. Jiang, T. Li and Y. Liu..	463

Material Engineering and Mechanical Manufacturing

Matching design of hydraulic load simulator with aircraft actuator	
Y. Shang, H. Yuan, Z. Jiao and N. Yao.....	470
Microstructure and mechanical properties of hybrid fabricated 1Cr12Ni2WMoV Nb steel by laser melting deposition	
Y. Wang, H. Tang, Y. Fang and H. Wang	481
Parameter optimization of controllable local degree of freedom for reducing vibration of flexible manipulator	
Y. Bian and Z. Gao	487
Auto-normalization algorithm for robotic precision drilling system in aircraft component assembly	
W. Tian, W. Zhou, W. Zhou, W. Liao and Y. Zeng	495
