Chem. World, 2020, 61(2), 92-98

Poly(vinyl pyrrolidone) (PVP) is a kind of polymeric fine chemical obtained by free radical polymerization of *N*-vinylpyrrolidone (NVP) under proper conditions. Synthetic methods and technique routes for the synthesis of NVP monomer are introduced in detail. The applications of PVP in the fields of medicine and health, daily chemical industry, food and beverage, textile printing and dyeing, paint and pigments are summarized.

In this article, antifungal activity, action mechanism and molecular probe of berberine are systematically reviewed so as to provide references for the development and related studies of berberine antifungal drugs.

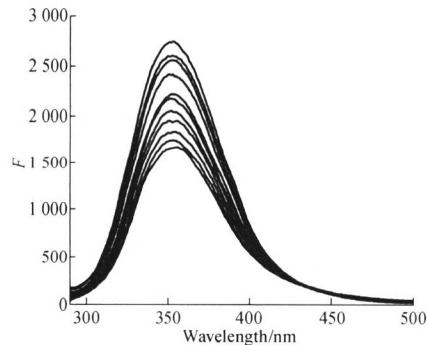

This paper briefly introduced a series of nitroimidazole compounds. The research progress and application of nitroimidazole derivatives in the fields of antibiosis, antituberculosis, antitumor, antivirus and antiprotozoa were summarized, and the future development trend of nitroimidazole derivatives was also prospected.

Discoloring Spectrophotometric Determination of Isoniazid by Potassium Bichromate

Tu Changqing, Wen Xinrong\*, Wang Jia  
Chem. World, 2020, 61(2), 116-120

A new discoloring spectrophotometric determination of isoniazid by potassium dichromate was established. The optimal conditions for the discoloring spectrophotometric determination of isoniazid by potassium bichromate were discussed. In the sulfuric acid medium, potassium bichromate can oxidize isoniazid, and its absorbance decreases with the increase of isoniazid concentration. The value of decreased absorbance is linearly related to the concentration of isoniazid so that the content of isoniazid can be indirectly determined by measuring the value of decreased absorbance.

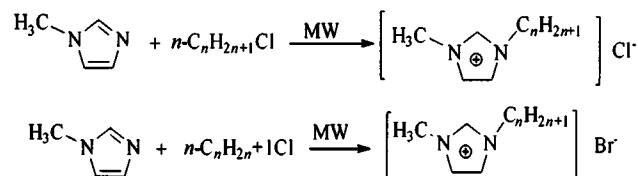

Synthesis of 4-Phenyl-2-pyrrolidone-1-acetamide

4-Phenyl-2-pyrrolidone-1-acetamide is a new type of nootropic drugs. An intermediate of 4-phenyl-2-pyrrolidone was synthesized from 4-amino-3-phenyl butyric acid hydrochloride by esterification and ammonolysis reactions with methanol and triethylamine, respectively. Alkylation of 4-phenyl-2-pyrrolidone (**1**) with ethyl bromide was carried out in the presence of sodium hydrogen so that 2-oxo-4-phenyl-1-pyrrolidineacetic acid ethyl ester (**2**) was produced. The target product (**3**) was obtained through the ammonolysis reaction using ammonia at room temperature.
