Acta Chimica Sinica

(Huaxue Xuebao)

第 76 卷 第 10 期 2018 年 10 月 15 日

目 次

综述

- 耐极端条件含氟材料的研究进展
..... 金维则, 陆国林, 李永军, 黄晓宇*, 化学学报, 2018, 76(10), 739-748
- 离子液体-无机颗粒杂化电解质在二次电池中的研究进展
..... 邱华玉, 赵井文*, 周新红*, 崔光磊*, 化学学报, 2018, 76(10), 749-756
- 沸石分子筛及其负载型催化剂去除 VOCs 研究进展
..... 冯爱虎, 于洋, 于云*, 宋力昕, 化学学报, 2018, 76(10), 757-773

研究通讯

- B(C₆F₅)₃ 催化的醛与烷氧基羟胺的一锅法还原胺化反应
..... 何云清, 滕金伟, 田冲, Borzov Maxim, 胡启山, 聂万丽*, 化学学报, 2018, 76(10), 774-778

研究论文

- 萘二酰亚胺[3]轮烷的设计合成及发光性能研究
..... 孙才力, 滕坤旭, 牛丽亚, 陈玉哲*, 杨清正*, 化学学报, 2018, 76(10), 779-784
- 高通量筛选金属-有机框架: 分离天然气中的硫化氢和二氧化碳
..... 杨文远, 梁红, 乔智威*, 化学学报, 2018, 76(10), 785-792
- 两种七氟醚自由基[(CF₃)₂C(•)OCH₂F, (CF₃)₂CHOC(•)HF]与氧气反应及 OH[•]再生机理的理论研究
..... 武卫荣, 员晓敏, 侯华, 王宝山*, 化学学报, 2018, 76(10), 793-801
- 常压下水自由基阳离子与双(2-羟乙基)二硫醚作用的质谱研究
..... 高校飞*, 何鹏, 陈焕文*, 化学学报, 2018, 76(10), 802-806
- 基于季铵盐改性 SiO₂空心球的抗菌/减反增透双功能薄膜的制备和研究
..... 王凯凯, 贺军辉*, 化学学报, 2018, 76(10), 807-812

* 通信联系人。

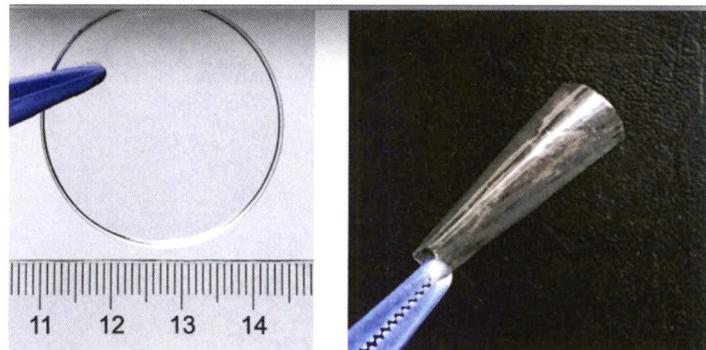

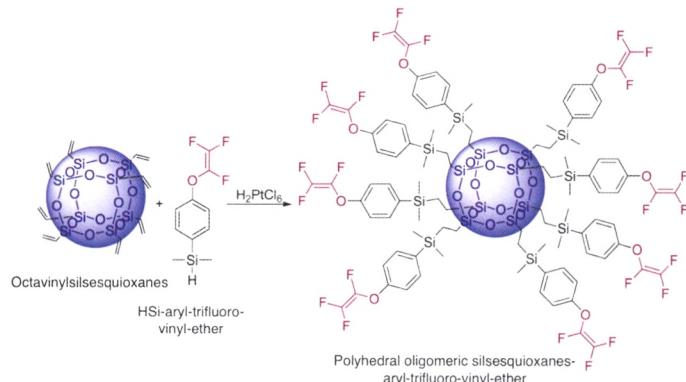

Contents

On the cover: An efficient one-pot reductive amination method has been developed by reaction of aldehydes and alkoxyamines with hydrosilanes as the hydride sources and $B(C_6F_5)_3$ as catalyst without cleavage of the N—O bond. This protocol can be used to prepare the secondary and tertiary alkoxyamines by starting from the primary and secondary ones, respectively. [Nie, Wanli *et al.* on page 774-778.]

Review

Recent Advances in Fluorine-containing Materials with Extreme Environment Resistance

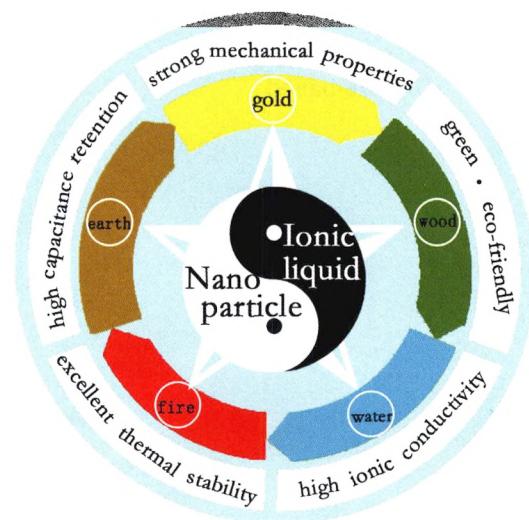

Jin, Weize; Lu, Guolin; Li, Yongjun; Huang, Xiaoyu*

Acta Chim. Sinica 2018, 76(10), 739-748

Materials with extreme environment resistance can be normally used under severe conditions, while the common hydrocarbon materials cannot tolerate. It was found that fluorine atoms can effectively enhance the extreme environment resistance property of materials. The development and present situation of fluorine-containing materials with extreme environment resistance are briefly introduced.

Research Progress of Ionic Liquid-Inorganic Particle Hybrid Electrolytes in Secondary Batteries

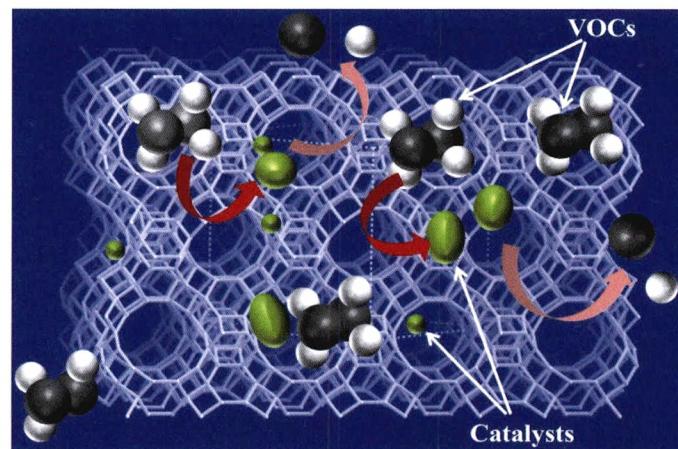

Qiu, Huayu; Zhao, Jingwen*; Zhou, Xin-hong*; Cui, Guanglei*

Acta Chim. Sinica 2018, 76(10), 749-756

The latest research progress of ionic liquid-inorganic particle hybrid electrolyte are summarized, and the synergistic mechanism of performance enhancement in terms of mechanical properties, thermal stability, capacitance retention, ion transference number, and conductivity is analyzed.

Recent Progress in the Removal of Volatile Organic Compounds by Zeolite and Its Supported Catalysts

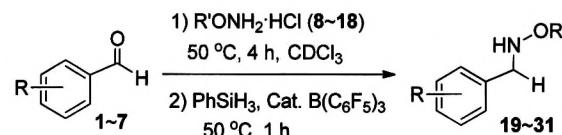

Feng, Aihu; Yu, Yang; Yu, Yun*; Song, Lixin

Acta Chim. Sinica 2018, 76(10), 757-773

In this review, a summary of recent research progress on the adsorption and catalytic oxidation of volatile organic compounds such as alkanes, aromatic hydrocarbons, aldehydes, ketones, acids, esters, alcohols and chlorinated hydrocarbons by zeolite and its supported catalysts is presented.

Communication

Reductive Amination by One Pot Reaction of Aldehydes and Alkoxyamines Catalyzed by $B(C_6F_5)_3$

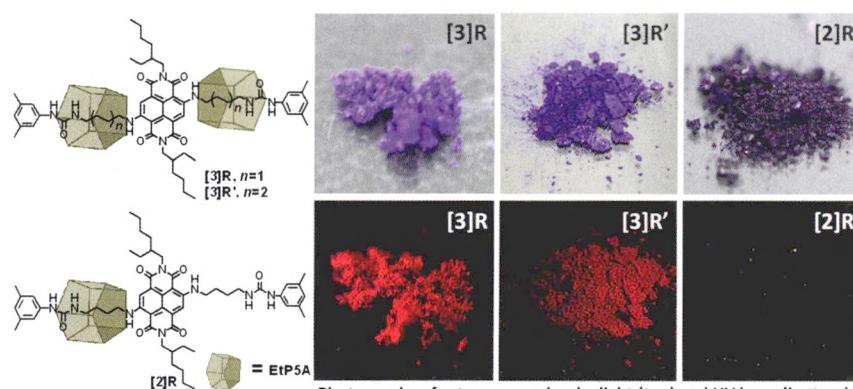

He, Yunqing; Teng, Jinwei; Tian, Chong; Borzov Maxim; Hu, Qishan; Nie, Wanli*

Acta Chim. Sinica 2018, 76(10), 774-778

An efficient one pot reductive amination method has been developed by reaction of aldehydes and alkoxyamines by using hydrosilanes as the hydride sources and $B(C_6F_5)_3$ as catalyst without cleavage of the N—O bond. Mechanism study has shown that a transformation of the intermediate oximes $ArCH=NOR$ to the “ammonium borates” $[ArCH=NHOR]^+[X-B(C_6F_5)_3]^-$ ($X=Cl, OH$) may take place in the reaction system, while the latter can be converted into the well-known active intermediate “ammonium hydroborates” $[ArCH=NHOR]^+[H-B(C_6F_5)_3]^-$ to reduce the C=N bond under mild condition in the presence of hydrosilanes.

Article

Synthesis and Photophysical Studies of Naphthalene Diimide-based [3]Rotaxanes

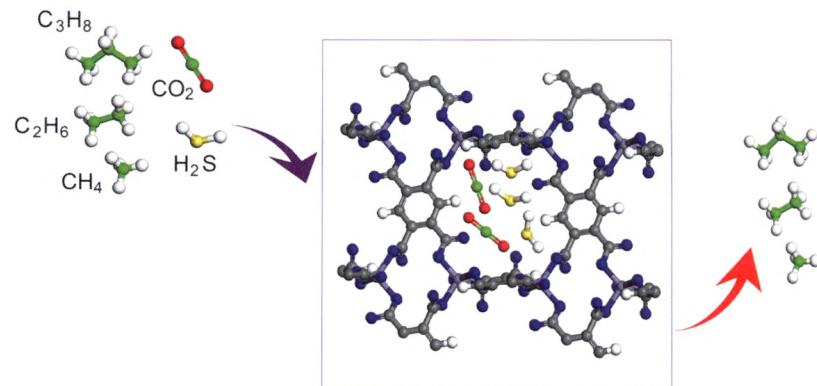

Photographs of rotaxanes under daylight (top) and UV lamp (bottom).

Sun, Cai-Li; Teng, Kun-Xu; Niu, Li-Ya; Chen, Yu-Zhe*; Yang, Qing-Zheng*

Acta Chim. Sinica 2018, 76(10), 779-784

High-Throughput Screening of Metal-Organic Frameworks for the Separation of Hydrogen Sulfide and Carbon Dioxide from Natural Gas

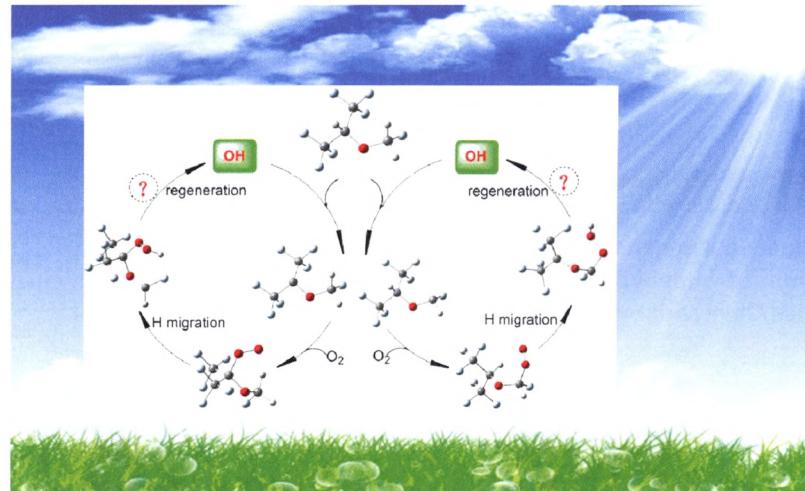

Yang, Wenyuan; Liang, Hong; Qiao, Zhiwei*

Acta Chim. Sinica 2018, 76(10), 785-792

A computational study is reported to screen metal-organic frameworks for H₂S and CO₂ separation from natural gas.

Theoretical Investigations on the Mechanisms for the Reactions of Sevoflurane Radicals [(CF₃)₂C(OCH₂F)•] with O₂ and the OH• Radicals Regeneration

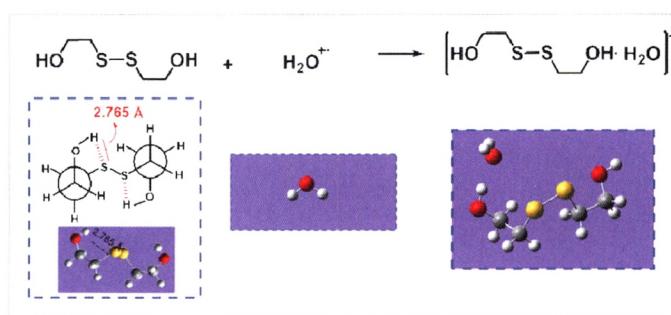

Atmospheric degradation of sevoflurane, a potent green-house gas, produces two radical species, namely, (CF₃)₂C(OCH₂F)• and (CF₃)₂CHOC(HF)•, with different reactivity. Mechanisms for the reactions of the two radicals with dioxygen (O₂) and OH-recycling reaction have been investigated at the M06-2X/6-311++G(d,p) and CBS-Q levels of theory.

Study on the Interaction Between Water Radical Cations and Bis(2-hydroxyethyl) Disulfide at Ambient Temperature and Pressure Using Mass Spectrometry

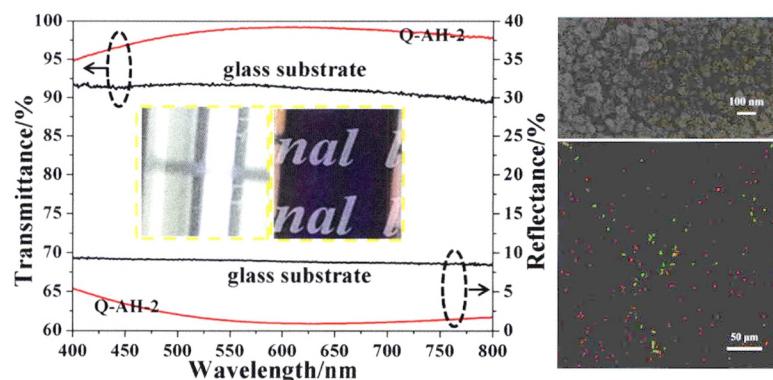

Gao, Xiao-Fei*; He, Peng; Chen, Huanwen*
Acta Chim. Sinica 2018, 76(10), 802-806

Thermodynamic theoretical calculation results demonstrated that H on the β -hydroxyl group of HEDS structure forms a weak hydrogen bond with S in the form of an intramolecular five-membered ring. During the interaction process, $(\text{H}_2\text{O})_n^+$ preferentially binds to the hydroxyl group of HEDS, forming a radical complex $(\text{M}+\text{H}_2\text{O})^+$, whose disulfide bond will be difficult to be cleaved. In conclusion, the β -hydroxyl group has a protective effect on the disulfide bond of HEDS during the interaction with water radical cations.

Fabrication and Study of Antibacterial/Antireflective Dual-functional Thin Films from Quaternary Ammonium Salt Modified Hollow Silica Nanospheres

Wang, Kaikai; He, Junhui*
Acta Chim. Sinica 2018, 76(10), 807-812

Antibacterial/antireflective dual-functional thin films were fabricated via dip-coating from quaternary ammonium salt modified hollow silica nanospheres sols. The optical properties of thin films were optimized by regulating the composition of sols. The optimal thin film coated glass substrate presented high transmittance ($T_{\max}=99.2\%$, $T_{\text{ave}}=98.6\%$) in the visible range of 400~800 nm. This method is simple and easy for large-area coating without any high-temperature heat treatment.
