第 77 卷 第 11 期 2019 年 11 月 15 日

目 次

综述

- 金属卤化物钙钛矿光催化的研究进展 李鑫, 张太阳, 王甜, 赵一新*, 化学学报, 2019, 77(11), 1075-1088
- 胞嘧啶脱氨基化酶 APOBEC3 家族及其与核酸复合物结构研究进展 金交羽, 严小璇, 刘亚平, 蓝文贤, 王春喜, 许斌*, 曹春阳*, 化学学报, 2019, 77(11), 1089-1098
- 酶法催化二氧化碳制备高附加值化学品研究进展 梁珊, 宗敏华, 娄文勇*, 化学学报, 2019, 77(11), 1099-1114
- 富锂锰基正极材料的表面改性研究进展 李钊, 王忠*, 班丽卿, 王建涛, 卢世刚, 化学学报, 2019, 77(11), 1115-1128
- 水滑石基负载型催化剂的制备及其在催化反应中的应用 余俊, 杨宇森*, 卫敏*, 化学学报, 2019, 77(11), 1129-1139
- 石墨烯在防腐薄膜和有机防腐涂层领域的理论和应用研究综述 丁锐, 陈思, 吕静, 桂泰江, 王晓, 赵晓栋, 刘杰, 李秉钧, 宋立英*, 李伟华*, 化学学报, 2019, 77(11), 1140-1155
- 功能化金属-有机框架材料在肿瘤治疗中的研究进展 曾锦跃, 王小双, 张先正*, 卓仁禧, 化学学报, 2019, 77(11), 1156-1163

研究通讯

- 电位调控电解质迁移过程的 ToF-SIMS 可视化研究 夏海伦, 华鑫*, 龙亿涛*, 化学学报, 2019, 77(11), 1164-1167
- Zn/Ni 双金属接力催化: 一锅法分子内环异构化/分子间酰胺化反应构建噁唑衍生物 张硕, 侯梓桐, 宋子贺, 苏晓峰, 王峰, 于一涛, 彭丹*, 崔仕麒, 刘一帆, 王佳睿, 宋建军*, 化学学报, 2019, 77(11), 1168-1172
- 二苯丙氨酸短肽手性结构的可控组装 李琦, 贾怡, 李峻柏*, 化学学报, 2019, 77(11), 1173-1176

研究论文

- 氧化石墨烯在水体中的迁移转化机制研究 石磊, 庞宏伟, 王祥学, 张盼, 于淑君*, 化学学报, 2019, 77(11), 1177-1183

* 通信联系人。

ACTA CHIMICA SINICA

Vol. 77, No. 11 November 15, 2019

Contents

On the cover: A high vacuum compatible electrochemical cell was constructed for *in-situ* monitoring of the electrode-electrolyte interface in high vacuum environment. Dynamic molecular information of the immigration process of KCl aqueous solution during the electrochemical reaction could be visualized via pore-confined liquid time-of-flight secondary ion mass spectrometry (ToF-SIMS). [Long, Yi-Tao *et al.* on page 1164-1167.]

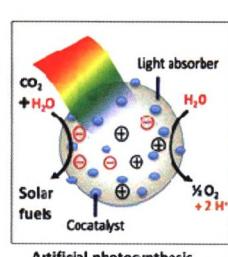

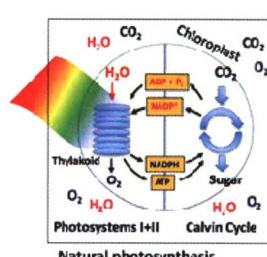

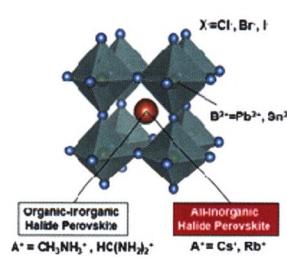

On the back cover: Metal halide perovskites with superior optoelectronic properties have been successfully utilized into various applications including photocatalysis. In this review, we summarized the recent advances of metal halide perovskite photocatalysts in hydrogen production, CO₂ reduction, pollution degradation and organic synthesis, and outlooked their challenges and future developments. [Zhao, Yixin *et al.* on page 1075-1088.]

Review

Recent Progress of Photocatalysis Based on Metal Halide Perovskites

Li, Xin; Zhang, Taiyang; Wang, Tian; Zhao, Yixin*

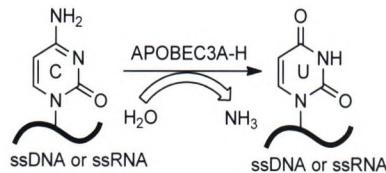

Acta Chim. Sinica 2019, 77(11), 1075-1088

ABX₃-type metal halide perovskites with excellent optoelectronic properties have been successfully utilized to photovoltaics as well as artificial photosynthesis. Herein, we focus on the recent advances of metal-halide-perovskite photocatalysts in photocatalytic hydrogen production, CO₂ reduction, organics degradation and transformation along with reaction mechanisms and key challenges of these promising photocatalysts.

Recent Advances in the Structural Studies on Cytosine Deaminase APOBEC3 Family Members and Their Nucleic Acid Complexes

Jin, Jiaoyu; Yan, Xiaoxuan; Liu, Yaping; Lan, Wenxian; Wang, Chunxi; Xu, Bin*; Cao, Chunyang*

Acta Chim. Sinica 2019, 77(11), 1089-1098

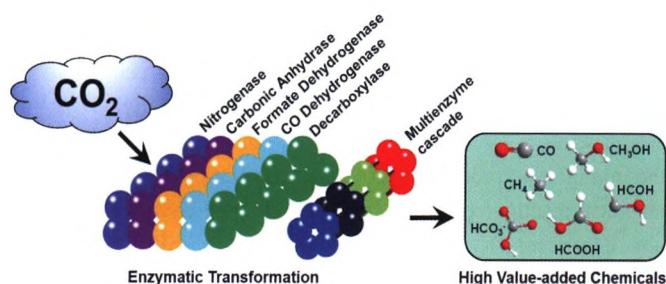

Human APOBEC3 family members deaminate cytosine in single-stranded DNA and RNA substrates by specially interacting with them, which play a variety of roles in human health and disease. This review summarized the recent progress on the structural studies on the free APOBEC3 members and their complexes with DNA or RNA, and proposed a possible research direction in this area in the future.

Recent Advances in Enzymatic Catalysis for Preparation of High Value-Added Chemicals from Carbon Dioxide

Liang, Shan; Zong, Minhua; Lou, Wenyong*

Acta Chim. Sinica 2019, 77(11), 1099-1114

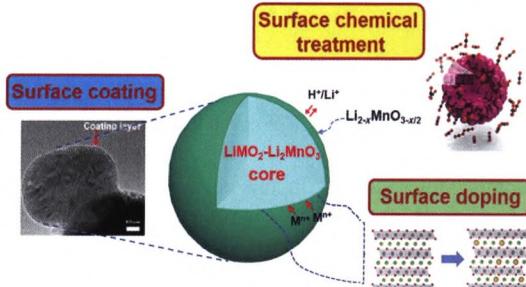

Excessive CO₂ emissions have created a double crisis of both energy and environment. Enzymatic transformation provides a green, mild, efficient and high selective strategy to realize sustainable recycling of CO₂. The recent advances in enzymatic conversion of CO₂ by various single enzymes and multi-enzyme cascade systems are systematically summarized in this review. Some emerging theories, methodologies and technologies in this field are also discussed. Additionally, the shortcomings and future perspectives of the enzymatic routes are concluded.

Recent Advances on Surface Modification of Li- and Mn-Rich Cathode Materials

Li, Zhao; Wang, Zhong*; Ban, Liqin; Wang, Jiantao; Lu, Shigang

Acta Chim. Sinica 2019, 77(11), 1115-1128

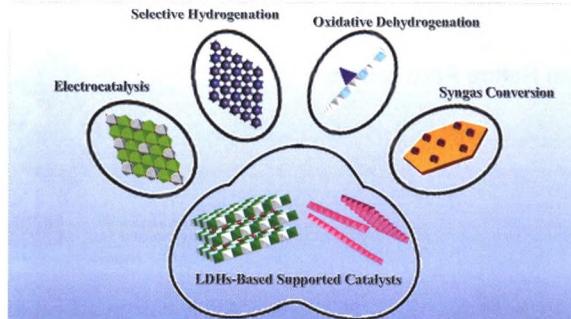

Recent advances on surface modification of Li- and Mn-Rich cathode materials are reviewed and the mechanism of three surface modification methods are discussed. On this basis, surface integrated strategies combined several surface modified methods are introduced and discussed in recent years. The surface integrated strategies not only enhance the structural stability and suppress electrode/electrolyte surface-interface reaction, but also have an effective role on mitigating structure transformation and lattice oxygen release.

Preparation and Catalytic Performance of Supported Catalysts Derived from Layered Double Hydroxides

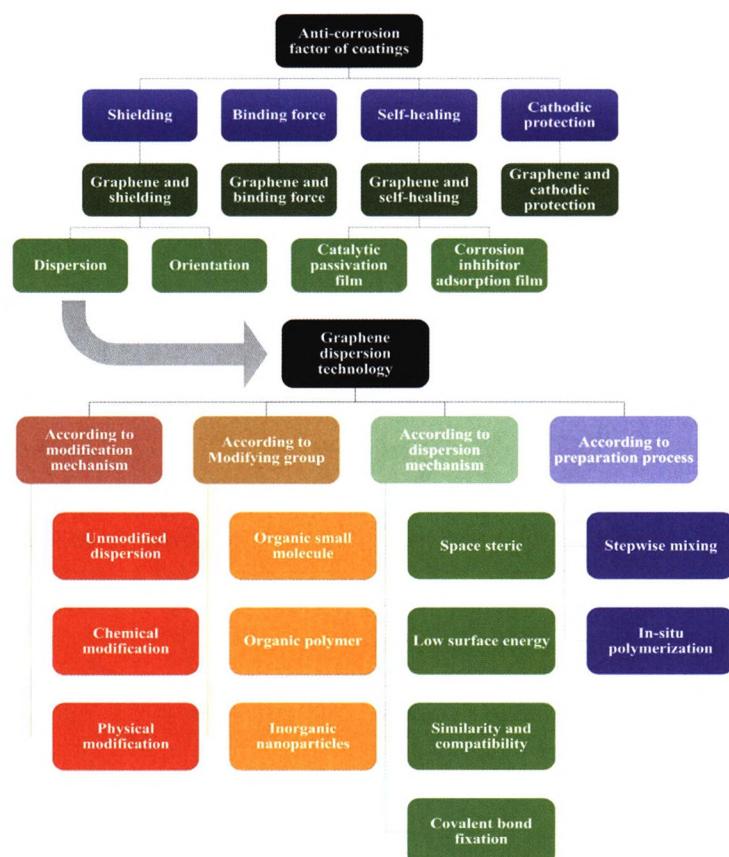

Yu, Jun; Yang, Yusen*; Wei, Min*

Acta Chim. Sinica 2019, 77(11), 1129-1139

Representative preparation methods and strategies for supported catalysts derived from layered double hydroxides are summarized, and their performance and promising applications in heterogeneous catalysis field are highlighted.

Review of Theoretical and Applied Research of Graphene in Anti-corrosion Film and Organic Anti-corrosion Coatings

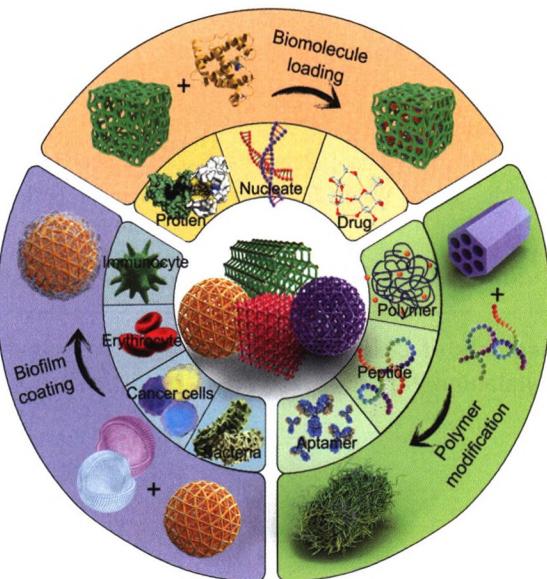

Ding, Rui; Chen, Si; Lv, Jing; Gui, Tai-jiang; Wang, Xiao; Zhao, Xiao-dong; Liu, Jie; Li, Bing-jun; Song, Li-ying*; Li, Wei-hua*

Acta Chim. Sinica 2019, 77(11), 1140-1155

This paper reviewed the graphene and protective effects of anti-corrosion coatings from four aspects. They are barrier, binding strength, self-healing properties and cathodic protection properties. Among them, the shielding property involved the dispersion technique and orientation alignment of graphene. The complicated graphene dispersion methods are summarized from four aspects: modification mechanism, modification group, dispersion mechanism and preparation process.

Research Progress in Functional Metal-Organic Frameworks for Tumor Therapy

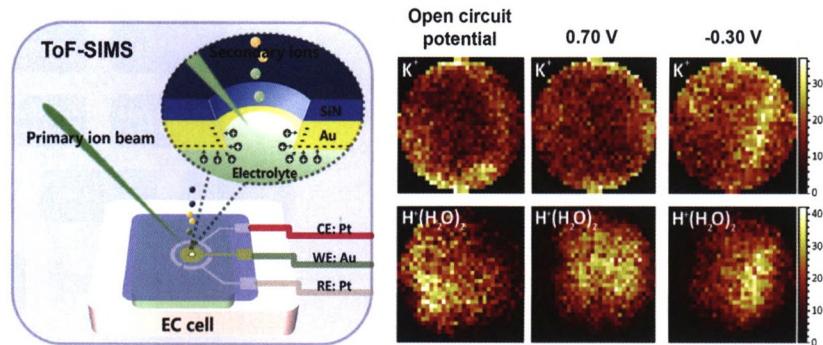

Zeng, Jinyue; Wang, Xiaoshuang; Zhang, Xianzheng*; Zhuo, Renxi

Acta Chim. Sinica 2019, 77(11), 1156-1163

Metal-organic frameworks (MOFs), a class of ordered porous crystal materials, have attracted extensive research attention for their biomedical applications in drug delivery, immobilized bio-macromolecules and tumor therapy. In this review, recent progress on the bio-functionalization of MOFs for tumor treatment is summarized. The development trend of functional MOFs for biomedical application is also prospected.

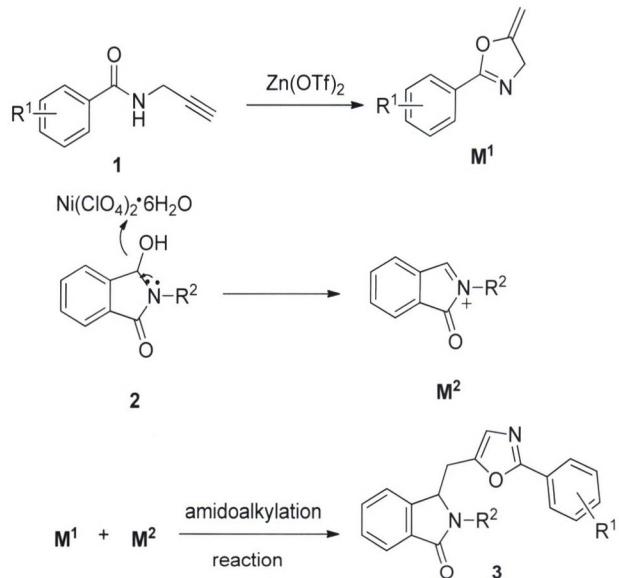

Communication

Visualization of the Electrolyte Migration under Electrochemical Process by ToF-SIMS

Xia, Hailun; Hua, Xin*; Long, Yi-Tao*

Acta Chim. Sinica 2019, 77(11), 1164-1167

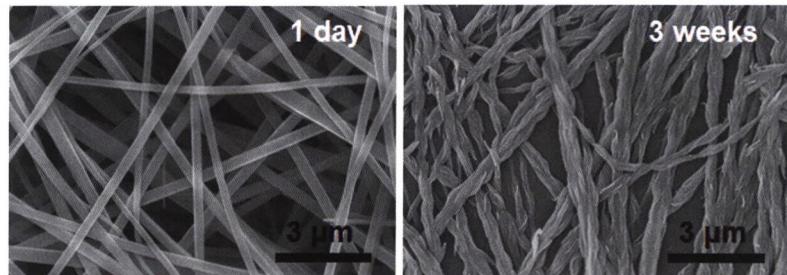

The chemical distributions of electrolyte under different potential was measured in real-time, indicating that the migration process of the electrolyte at the electrode-electrolyte interface could be visualized by ToF-SIMS in the high vacuum environment.

Zn/Ni Bimetallic Relay Catalysis: One Pot Intramolecular Cycloisomerization/Intermolecular Amidoalkylation Reaction toward Oxazole Derivatives

Zhang, Shuo; Hou, Zitong; Song, Zihe; Su, Xiaofeng; Wang, Feng; Yu, Yitao; Peng, Dan*; Cui, Shiqi; Liu, Yifan; Wang, Jiarui; Song, Jianjun*

Acta Chim. Sinica 2019, 77(11), 1168-1172

The first step of the one-pot procedure is that $Zn(OTf)_2$ acts as a π acid to activate the triple bond of *N*-(propargyl)-arylamides, and a subsequent intramolecular 5-*exo*-dig cyclization forms the oxazoline intermediate M^1 . Separately, $Ni(ClO_4)_2 \cdot 6H_2O$ acts as Lewis acid to activate and facilitate the departure of 3-hydroxyl group to form the electrophilic acylium ions M^2 , which is transformed to the oxazole derivatives in the intermolecular amidoalkylation reaction.

Controlled Assembly of Chiral Structure of Diphenylalanine Peptide

Li, Qi; Jia, Yi; Li, Junbai*

Acta Chim. Sinica 2019, 77(11), 1173-1176

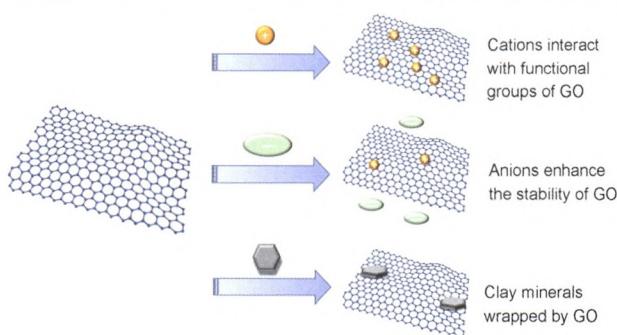

Helical cationic diphenylalanine peptide (CDP) fibers are obtained by simply controlling the aging time in ethanol.

Article

Study on the Migration and Transformation Mechanism of Graphene Oxide in Aqueous Solutions

Shi, Lei; Pang, Hongwei; Wang, Xiangxue;
Zhang, Pan; Yu, Shujun*

Acta Chim. Sinica 2019, 77(11), 1177-1183

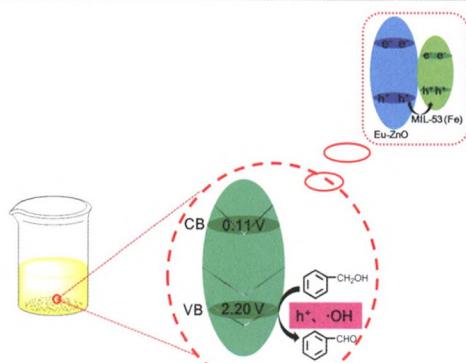

The effects of different cations, anions and clay minerals on GO coagulation at different concentrations.

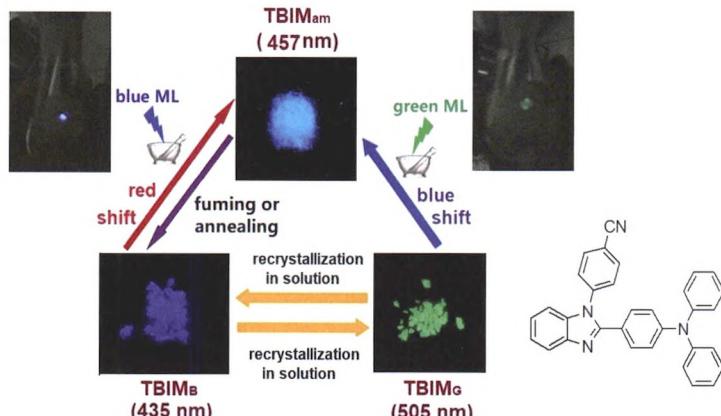

Preparation of Eu-doped ZnO/MIL-53 (Fe) Photocatalyst and Its Catalytic Performance for Selective Oxidation of Alcohols

Meng, Shuangyan; Wang, Mingming; Lü, Bolin; Xue, Qunji*; Yang, Zhiwang*

Acta Chim. Sinica 2019, 77(11), 1184-1193

The novel 3D photocatalyst Eu-ZnO/MIL-53(Fe) was prepared by *in situ* method. This design effectively promoted the separation of photo-generated electron-hole. Hole (h^+) and hydroxyl radicals ($\cdot OH$) were the main active species.

Two Polymorphs of Triphenylamine-substituted Benzo[d]imidazole: Mechanoluminescence with Different Colors and Mechanochromism with Emission Shifts in Opposite Direction

Liu, Xiaojing; Jia, Yanrong; Jiang, Hao; Gao, guanlei; Xia, Min*

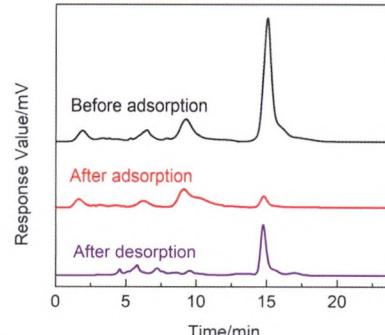

Acta Chim. Sinica 2019, 77(11), 1194-1202

Two polymorphs TBIM_B and TBIM_G of 4-(2-(4-(diphenylamino)phenyl)-1*H*-benzo[*d*]imidazol-1-yl)benzonitrile (TBIM) display different-colored mechanoluminescence (ML) effect excited by endogenous friction discharge due to relative motions among cleavage planes when crystals are exposed to force stimuli. TBIM_B exhibits reversibly red-shifted emission while TBIM_G presents irreversibly blue-shifted emission when they are ground.

A New Method for Enriching baicalin in *Scutellaria baicalensis Georgi* by Metal Organic Framework Material ZIF-8

Guo, Wenjuan*; Yu, Jie; Dai, Zhao; Hou, Weizhao

Acta Chim. Sinica 2019, 77(11), 1203-1210

In this work, the ZIF-8 was used to carry out the static adsorption experiment on the crude extract of *Radix Scutellariae*. The desorption of the ZIF-8 material saturated with baicalin was carried out with phosphate buffered saline (PBS) solution. After the desorption was completed, the purpose of adsorbent regeneration was achieved. The adsorption conditions were also optimized to achieve the best adsorption performance.
