(Huaxue Xuebao)

第 78 卷 第 9 期 2020 年 9 月 15 日

目 次

研究评论

- 多孔有机聚合物基仿生催化材料构建 孙琦, 肖丰收*, 化学学报, 2020, 78(9), 827-832
碳基介熵材料: 理论与实验 封博谞, 庄小东*, 化学学报, 2020, 78(9), 833-847

综述

- 功能性可拉伸有机电子器件的研究进展 边洋爽, 刘凯, 郭云龙*, 刘云圻, 化学学报, 2020, 78(9), 848-864
形状记忆聚合物变形模式研究进展 张澜, 马慷慨, 王寒冰, 梁云虹*, 张志辉, 化学学报, 2020, 78(9), 865-876
氧化石墨烯的表面化学修饰及纳米-生物界面作用机理 马明昊, 徐明*, 刘思金, 化学学报, 2020, 78(9), 877-887
金属有机框架质子导体及其质子交换膜的研究进展 孙炼, 王洪磊, 余金山, 周新贵*, 化学学报, 2020, 78(9), 888-900
近红外二区有机小分子荧光探针 桑若愚, 许兴鹏, 王其*, 范曲立*, 黄维, 化学学报, 2020, 78(9), 901-915
化学链合成氨研究进展 冯圣, 高文波, 曹湖军, 郭建平*, 陈萍, 化学学报, 2020, 78(9), 916-927

研究通讯

- Phainanoids 的 4,5-螺环骨架的合成探索 江崇国, 陈斯嘉, 龚建贤*, 杨震*, 化学学报, 2020, 78(9), 928-932

研究论文

- N-硫二氟甲基膦酸二乙酯邻苯二甲酰亚胺: 一种新的亲电氟烷硫基试剂 沈峰, 吕龙*, 沈其龙*, 化学学报, 2020, 78(9), 933-937
二乙基锌促进 CO₂ 的硅氢化反应以及 CO₂ 为 C1 合成子的有机胺甲酰化或脲化反应 杜重阳, 陈耀峰*, 化学学报, 2020, 78(9), 938-944
基于苯乙烯和苯并噻二唑共聚场效应发光高分子材料的设计合成及性能研究 刘情情, 张逸寒, 高灿, 王天禹, 胡文平, 董焕丽*, 化学学报, 2020, 78(9), 945-953
多功能 Fe₃O₄@SiO₂ Janus 颗粒 赵若彤, 韩天昊, 孙大吟, 山丹, 刘正平*, 梁福鑫*, 化学学报, 2020, 78(9), 954-960
微波诱导组装 CuS@MoS₂ 核壳纳米管及其光催化类芬顿反应研究 赵晶晶, 张正中, 陈小浪, 王蓓, 邓近远, 张蝶青*, 李和兴*, 化学学报, 2020, 78(9), 961-967
亚晶格能量团簇构建及晶场调控对四方 LiYF₄:RE 上转换发光机制的影响研究 黄清明*, 化学学报, 2020, 78(9), 968-979
二维硫水铜基纳米片的合成及在硫醚类化合物催化氧化中的应用 杨忠杰, 张小飞, 施亚男, 隆昶, 张彬灏, 闫书豪, 常琳, 唐智勇*, 化学学报, 2020, 78(9), 980-988
萤火虫生物发光中加氧反应机理的理论研究 于沫涵, 程媛媛, 刘亚军*, 化学学报, 2020, 78(9), 989-993
无序随机多肽组分相关的结构转变的蒙特卡洛模拟: 以赖氨酸、谷氨酸和异亮氨酸组成的随机多肽为例 张鹏程, 郭佳, 朱根, 方文玉, 唐乾元*, 鲍磊*, 康文斌*, 化学学报, 2020, 78(9), 994-1000
S 掺杂 Fe-NC 单原子催化剂氧还原机理研究 鲁效庆*, 曹守福, 魏晓飞, 李邵仁, 魏淑贤*, 化学学报, 2020, 78(9), 1001-1006

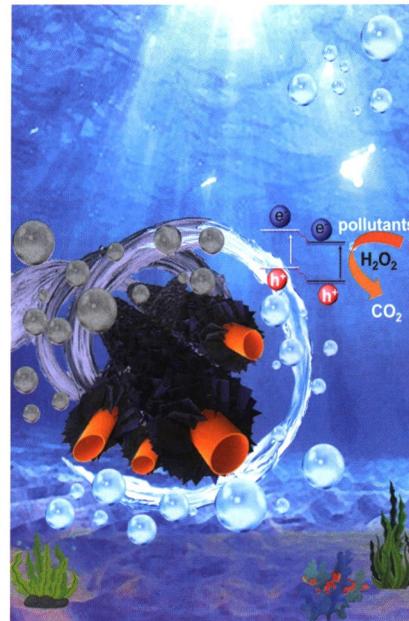

* 通信联系人。

ACTA CHIMICA SINICA

Vol. 78, No. 9 September 15, 2020

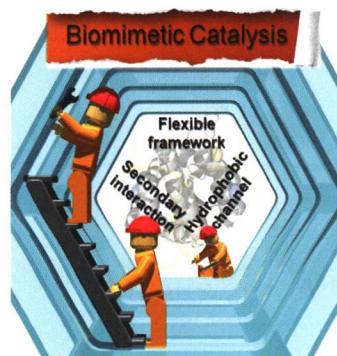

Contents

On the cover: The multi-layer structure of CuS@MoS₂ core-shell nanotubes not only improves the utilization of light, but also promotes the rapid transfer of photogenerated electrons. On this basis, in the presence of hydrogen peroxide, CuS@MoS₂ exhibits excellent pollutant degradation ability in photocatalysis and Fenton-like reaction systems, which may offer a new way for the treatment of water pollution. [Li, Hexing *et al.* on page 961-967.]

Account

Exploration of Porous Organic Polymers as a Platform for Biomimetic Catalysis

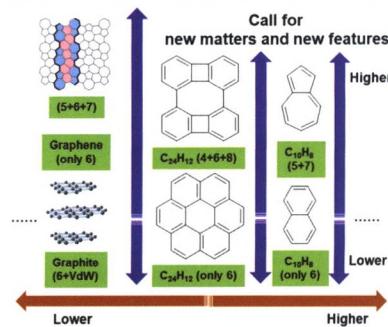

Sun, Qi; Xiao, Feng-Shou*

Acta Chim. Sinica 2020, 78(9), 827-832

Based on the concepts of secondary interaction modification, flexible framework design, and wettability control commonly adopted in nature, numerous efficient catalytic systems have been developed using porous organic polymers as a designer platform.

Carbon-Enriched meso-Entropy Materials: from Theory to Cases

The Race Starts: Meso-Entropy Matter

Feng, Boxu; Zhuang, Xiaodong*

Acta Chim. Sinica 2020, 78(9), 833-847

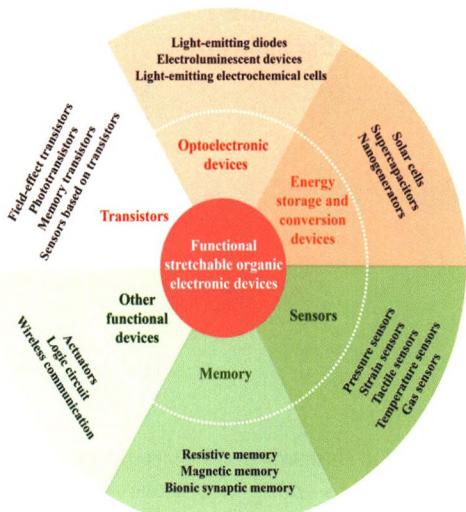

Meso-entropy concept defined relationship for carbon-enriched materials is proposed for fundamental understanding and development of new carbon-enriched materials.

Review

Research Progress in Functional Stretchable Organic Electronic Devices

Bian, Yangshuang; Liu, Kai; Guo, Yunlong*; Liu, Yunqi

Acta Chim. Sinica 2020, 78(9), 848-864

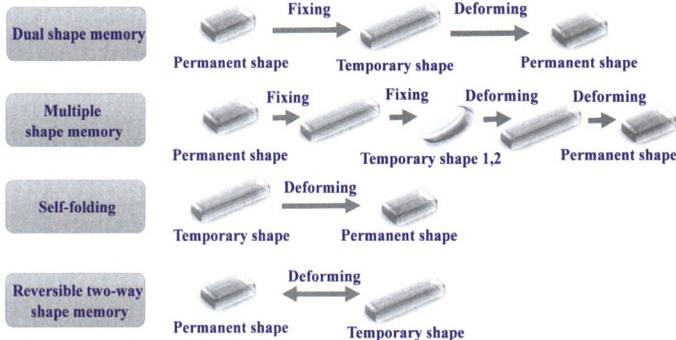

Research advances in functional stretchable organic electronic devices are discussed, including transistors, optoelectronic devices, energy storage and conversion devices, sensors, memory and other functional electronic devices.

Research Progress of Shape Memory Polymer Deformation Mode

Zhang, Lan; Ma, Suqian; Wang, Hanbing; Liang, Yunhong*; Zhang, Zhihui

Acta Chim. Sinica 2020, 78(9), 865-876

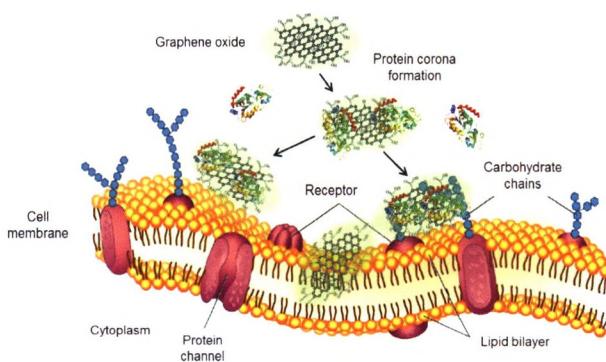

Shape memory polymers are the most widely studied smart deformable materials at present. In this paper, the deformation modes of shape memory polymers are divided into four categories, including the dual shape memory, the multiple shape memory, the self-folding, and the reversible two-way shape memory. In this review, the different deformation modes of shape memory polymers and the progress of their related applications, as well as the challenges faced by different deformation modes and their potential research directions are discussed.

Surface Chemical Modifications of Graphene Oxide and Interaction Mechanisms at the Nano-Bio Interface

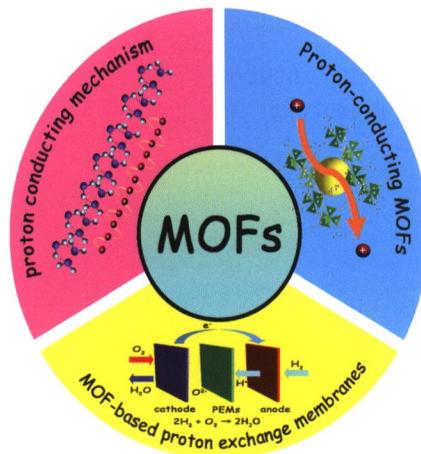

Ma, Minghao; Xu, Ming*; Liu, Sijin

Acta Chim. Sinica 2020, 78(9), 877-887

As a two-dimensional nanomaterial, graphene oxide (GO) has been widely applied in material chemistry, biomedical science and life science, but how to maximize the advantages of GO and overcome the deleterious effects caused by its inherent physico-chemical properties remains to be answered. To update the latest knowledge of surface chemical modifications of GO, the recent progress in this aspect and potential biological effects of surface-modified GO, as well as interaction mechanisms at the nano-bio interface is reviewed. Furthermore, the knowledge gaps and challenges in this research field are detailedly discussed.

Recent Progress on Proton-Conductive Metal-Organic Frameworks and Their Proton Exchange Membranes

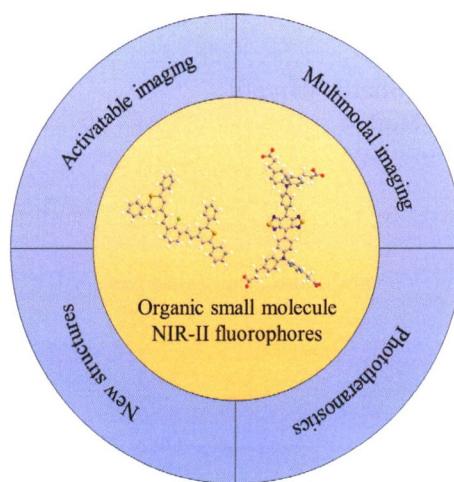

Sun, Lian; Wang, Honglei; Yu, Jinshan;
Zhou, Xingui*

Acta Chim. Sinica **2020**, 78(9), 888-900

Metal organic frameworks (MOF) are attractive candidates for proton exchange membranes due to their high porosity, crystallinity and designability. This review focuses on the recent progress on proton-conductive MOF structures and their proton exchange membranes.

Near-Infrared-II Fluorescence Probes Based on Organic Small Molecules

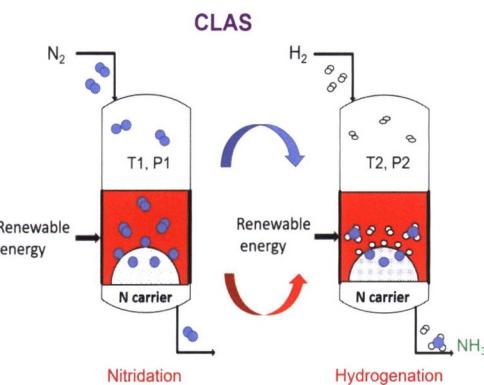

Sang, Ruoyu; Xu, Xingpeng; Wang, Qi*;
Fan, Quli*; Huang, Wei

Acta Chim. Sinica **2020**, 78(9), 901-915

Fluorescence imaging in the near-infrared II (NIR-II) region has been gaining prominence because it can provide higher imaging quality, macroscopic ultra-sensitivity, as well as higher penetration depth compared with fluorescence imaging in the NIR-I region.

Advances in the Chemical Looping Ammonia Synthesis

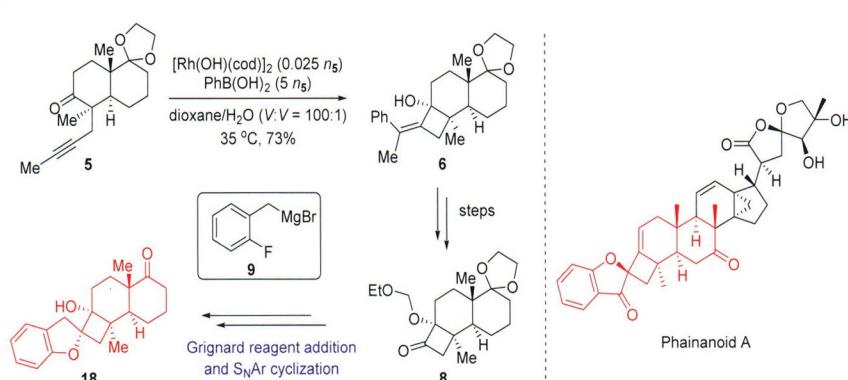

Feng, Sheng; Gao, Wenbo; Cao, Hujun; Guo, Jianping*; Chen, Ping

Acta Chim. Sinica **2020**, 78(9), 916-927

The recent progress in chemical looping ammonia synthesis driven by renewable energy is reviewed, with the focuses on the materials development and optimization of nitrogen carriers.

Communication

Synthetic Study Toward the 4,5-Spirocyclic Skeleton of Phainanoids

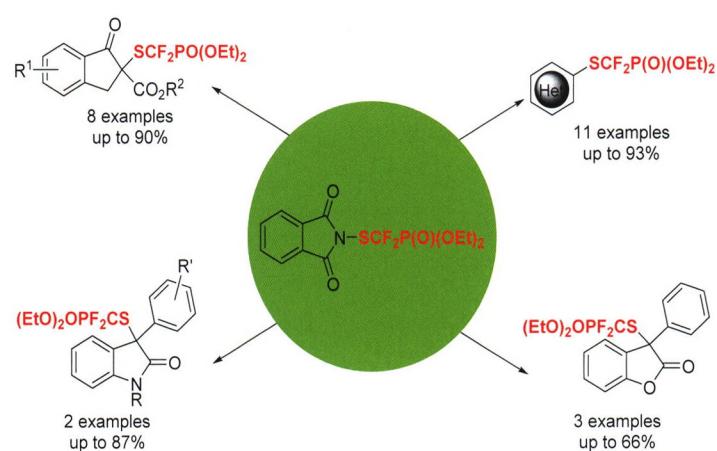

Jiang, Chongguo; Chen, Sijia; Gong, Jianxian*; Yang, Zhen*

Acta Chim. Sinica 2020, 78(9), 928-932

Article

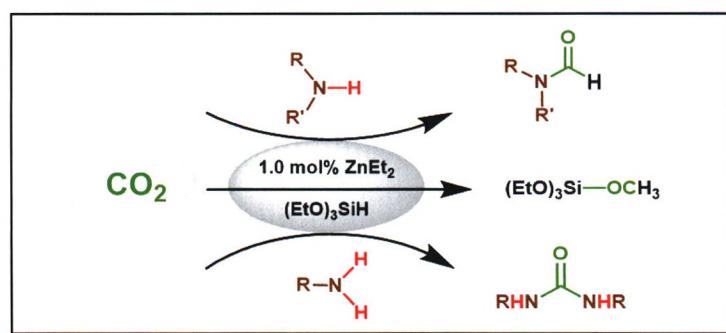

N-[(Diethoxyphosphoryl)difluoromethylthio]phthalimide: A New Electrophilic Fluoroalkylthiolating Reagent

Shen, Feng; Lu, Long*; Shen, Qilong*

Acta Chim. Sinica 2020, 78(9), 933-937

A shelf-stable reagent for the preparation of fluoroalkylthiolated compounds, [(diethylphosphonate)difluoromethylthio]phthalimide **1**, was successfully developed, which could react with electron-rich heteroarenes, β -ketoesters, oxindoles and benzofuranones respectively in high yield.

 ZnEt_2 Promoted Hydrosilylation of CO_2 and Formylation or Urealation of Amines with CO_2 as a C1 Building Block

Du, Chongyang; Chen, Yaofeng*

Acta Chim. Sinica 2020, 78(9), 938-944

In the presence of 1.0 mol% ZnEt_2 , hydrosilylation of CO_2 with $(\text{EtO})_3\text{SiH}$ occurs to give methoxysilane ($\text{CH}_3\text{OSi}(\text{OEt})_3$) in high yield. When organic amine is added to the above reaction system, formamide or urea derivative is generated. The secondary amine provides the formamide while the primary amine affords the urea derivative.

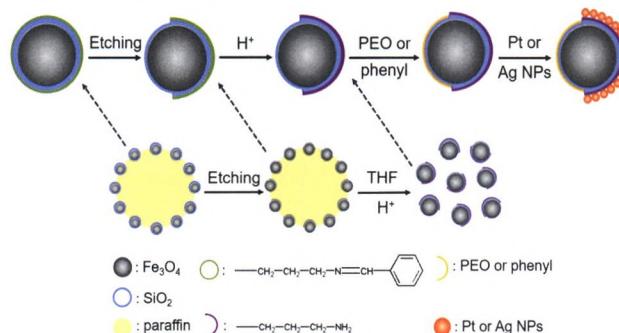

Synthesis and Property Study of Field-effect Emissive Conjugated Polymers Based on Styrene and Benzothiadiazole

Liu, Qingqing; Zhang, Yihan; Gao, Can; Wang, Tianyu; Hu, Wenping; Dong, Huanli*

Acta Chim. Sinica 2020, 78(9), 945-953

Multifunctional $\text{Fe}_3\text{O}_4@\text{SiO}_2$ Janus Particles

Zhao, Ruotong; Han, Tianhao; Sun, Dayin; Shan, Dan; Liu, Zhengping*; Liang, Fuxin*

Acta Chim. Sinica 2020, 78(9), 954-960

Microwave-induced Assembly of $\text{CuS}@\text{MoS}_2$ Core-shell Nanotubes and Study on Their Photocatalytic Fenton-like Reactions

Zhao, Jingjing; Zhang, Zhengzhong; Chen, Xiaolang; Wang, Bei; Deng, Jinyuan; Zhang, Dieqing*; Li, Hexing*

Acta Chim. Sinica 2020, 78(9), 961-967

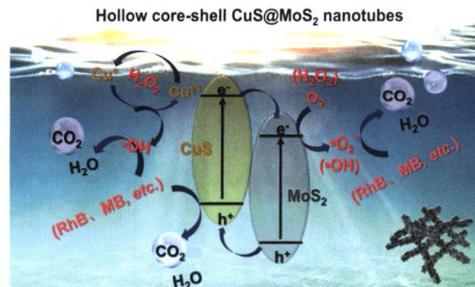

Study on the Upconversion Luminescence Mechanism of Tegtragonal $\text{LiYF}_4:\text{RE}$ with Sublattice Energy Cluster Construction and Crystal Field Manipulation

Huang, Qingming*

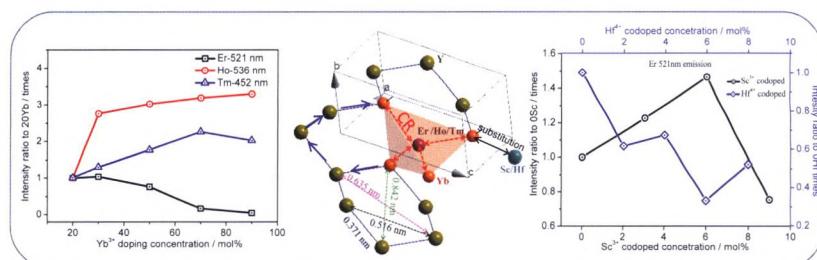

Acta Chim. Sinica 2020, 78(9), 968-979

In this work, we synthesized two new conjugated polymers, PVBT and nPVBT based on copolymerized emitting unit of styrene and electron withdrawing unit of benzothiadiazole where styrene is used for modulating the emission characteristics and BTz used for tuning charge transport property to achieve integrated optoelectronic performances. Results demonstrate that both of PVBT and nPVBT are field-effect emissive conjugated polymers with maximum luminous wavelength at 590~605 nm and high photoluminescence quantum yields of 23%~35% in dichloromethane solution ($1 \times 10^{-5} \text{ mol}\cdot\text{L}^{-1}$), and 12%~20% in solid films. This work provides valuable guideline for developing high mobility emissive conjugated polymers towards solution-processed optoelectronic device applications.

The Janus particles as a solid emulsifier were emulsified in paraffin/water to obtain an oil-in-water Pickering emulsion. The particles were etched in ammonium fluoride aqueous solution. Via the *in situ* growth of metal Pt or Ag nanoparticles, $\text{Fe}_3\text{O}_4@\text{SiO}_2$ -Pt or $\text{Fe}_3\text{O}_4@\text{SiO}_2$ -Ag Janus particles were obtained.

Under the synergistic of photocatalysis and Fenton-like reaction, large amounts of •OH and •O2- are produced to degrade pollutants together.

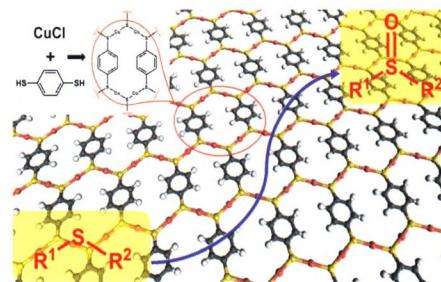

Tetragonal LiYF_4 shows hexagonal sublattice structure of Y^{3+} ions, different sublattice energy clusters of 1Er-2Yb, 1Ho-2Yb and 1Tm-4Yb can be constructed, and crystal field asymmetry were successfully manipulated by Sc^{3+} or Hf^{4+} doping. The upconversion luminescence influence mechanism of the construction of sublattice energy clusters and crystal field manipulation with Sc^{3+} or Hf^{4+} as dopant were revealed.

Synthesis of Two-dimensional Hydrophobic Copper-based Nanosheets and Their Application in Catalytic Oxidation of Sulfides

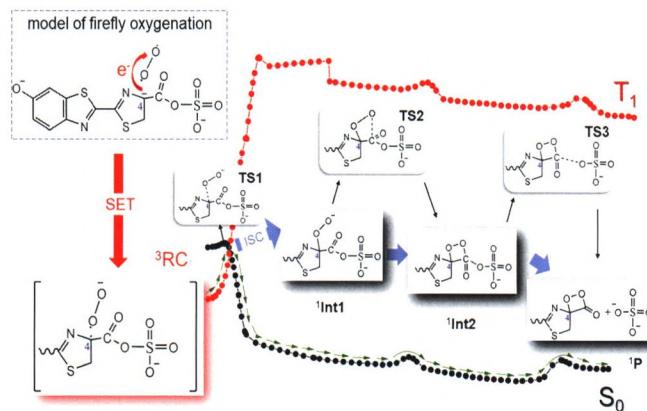

Yang, Zhongjie; Zhang, Xiaofei; Shi, Yanan; Long, Chang; Zhang, Binshao; Yan, Shuhao; Chang, Lin; Tang, Zhiyong*

Acta Chim. Sinica 2020, 78(9), 980-988

Two-dimensional hydrophobic copper-based nanosheets were constructed by using monovalent copper ion as the metal precursor and 1,4-benzenedithiol as organic ligand, which exhibited high catalytic performance for oxidation of sulfides.

Mechanistic Study of Oxygenation Reaction in Firefly Bioluminescence

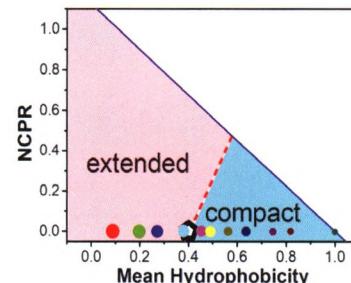

Yu, Mohan; Cheng, Yuanyuan; Liu, Yajun*

Acta Chim. Sinica 2020, 78(9), 989-993

Monte Carlo Simulations of Composition-Related Structural Transition of Disordered Peptides: The Case Study of Random Peptides Composed of Lysine, Glutamic Acids and Isoleucine

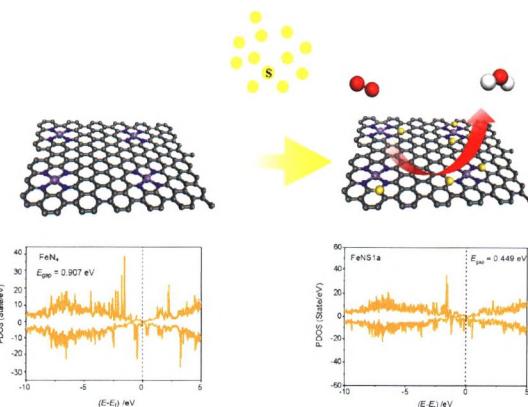

Zhang, Pengcheng; Guo, Jia; Zhu, Gen; Fang, Wenyu; Tang, Qianyuan*; Bao, Lei*; Kang, Wenbin*

Acta Chim. Sinica 2020, 78(9), 994-1000

With the ABSINTH (self-Assembly of Biomolecules Studied by an Implicit, Novel, and Tunable Hamiltonian) implicit solvation model, our all-atom Markov Chain Monte Carlo simulations clearly show a transition between the extended conformations to compact structures for each peptide.

Investigation on Oxygen Reduction Reaction Mechanism on S Doped Fe-NC Isolated Single Atoms Catalyst

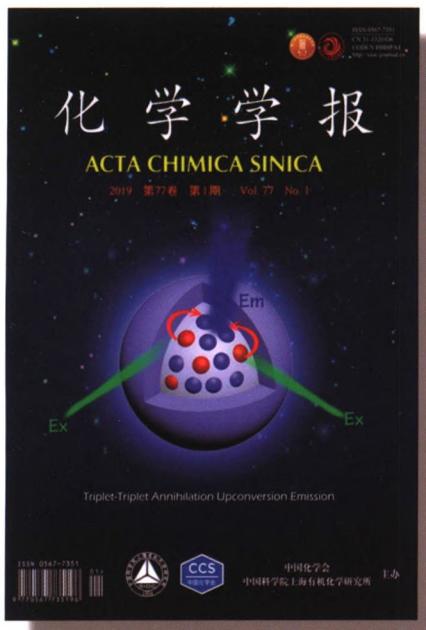

Lu, Xiaoqing*; Cao, Shoufu; Wei, Xiaofei; Li, Shaoren; Wei, Shuxian*

Acta Chim. Sinica 2020, 78(9), 1001-1006

The doping of sulfur atoms on FeN₄ catalysts would reduce the band gap of the catalyst, thus improves the conductivity of the catalyst, which is beneficial to electrocatalytic oxygen reduction reactions.
