目次

研究论文

- 表面双重后处理方法提升三元 NiMgO 半导体界面层及其有机太阳能电池的性能
..... 何新蕊, 蔡丽娜, 陈汉生, 尹攀, 尹志刚*, 郑庆东*, 化学学报, 2022, 80(5), 581-589
- HMOR 分子筛骨架铝分布研究及二甲醚羰基化反应活性中心的辨识
..... 张瑾, 丁湘浓, 刘红超, 樊栋, 徐舒涛*, 魏迎旭, 刘中民, 化学学报, 2022, 80(5), 590-597
- 基于神经网络势与增强采样的气相水团簇成核过程研究
..... 徐森, 吴丽铃, 李震宇*, 化学学报, 2022, 80(5), 598-606
- CdS 基纳米管光催化氧化 5-羟甲基糠醛选择性生成 2,5-呋喃二甲醛
..... 舒恒, 包义德日根, 那永*, 化学学报, 2022, 80(5), 607-613
- 机器学习与分子模拟协同的 CH₄/H₂ 分离金属有机框架高通量计算筛选
..... 王诗慧, 薛小雨, 程敏, 陈少臣, 刘冲, 周利, 毕可鑫, 吉旭*, 化学学报, 2022, 80(5), 614-624
- 模板法控制合成 AgInSe₂:Zn²⁺ 近红外荧光量子点及其生物标记应用
..... 廉纬, 方泽铠, 涂大涛*, 李嘉尧, 韩思远, 李仁富, 商晓颖, 陈学元*, 化学学报, 2022, 80(5), 625-632
- Rb₂MGe₃S₈ (M=Zn, Cd): [MGe₃S₈]²⁻ 单元构型变换导致化合物从中心到非心的转变
..... 柴贤丹, 陈文发, 闫秋楠, 刘彬文, 姜小明*, 郭国聪*, 化学学报, 2022, 80(5), 633-639
- 两例新的镧系金属-有机框架化合物高效去除 Cs⁺ 离子研究
..... 吕天天, 马文, 詹冬笋, 邹燕敏, 李继龙, 冯美玲*, 黄小荣, 化学学报, 2022, 80(5), 640-646
- 基于 L/D-赖氨酸盐酸盐和光活化 AIE 分子共组装实现圆偏振发光及动态调控
..... 冯锡成, 朱亮亮, 岳兵兵*, 化学学报, 2022, 80(5), 647-651

研究展望

- 辨微识源: 纳米颗粒物溯源技术的新进展
..... 杨学志, 陆达伟, 王伟超, 杨航, 刘倩*, 江桂斌, 化学学报, 2022, 80(5), 652-658

综述

- 聚合物材料表面化学镀铜的前处理研究进展
..... 郑安妮, 金磊, 杨家强, 李威青, 王赵云, 杨防祖*, 詹东平*, 田中群, 化学学报, 2022, 80(5), 659-667
- 基于纳米材料的脓毒症治疗策略
..... 李真, 陈杰, 田华雨*, 陈学思, 化学学报, 2022, 80(5), 668-678

* 通信联系人.

基于微流控热泳的生物传感技术
..... 刘超, 田飞, 邓瑾琦, 孙佳妹*, 化学学报, 2022, 80(5), 679-689

溶液小角散射技术在软物质研究中的应用与展望
..... 宋攀奇, 张建桥, 李怡雯, 刘广峰, 李娜*, 化学学报, 2022, 80(5), 690-702

ACTA CHIMICA SINICA

Vol. 80, No. 5 May 15, 2022

Contents

On the cover: A dual post-treatment method is developed by combining surface rinse with ultraviolet-ozone treatment to optimize structures and properties of Mg-doped NiO (NiMgO) semiconductor films. Using the ternary NiMgO films as a novel type of hole transport layers, highly efficient and stable organic solar cells are achieved with a non-fullerene bulk heterojunction of PM6:M36. [Yin, Zhigang *et al.* on page 581-589.]

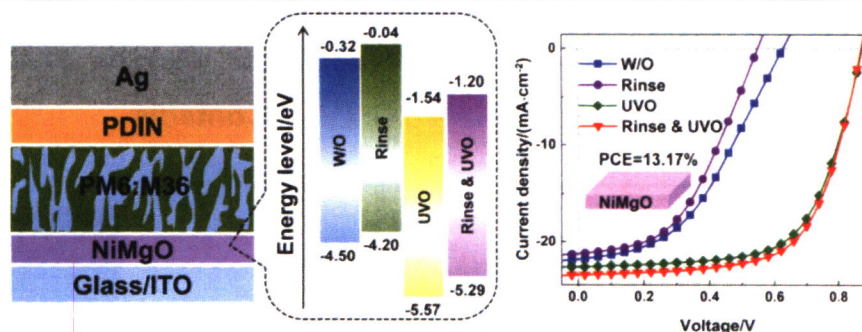

On the back cover: Monte Carlo simulations with a neural network potential reveal the gas phase nucleation behavior of water molecules. The transition from two-dimensional ring structures to three dimensional hydrogen bond network structures starts at $(\text{H}_2\text{O})_5$, although the ground-state structure of $(\text{H}_2\text{O})_5$ remains to be a two-dimensional ring. [Li, Zhenyu *et al.* on page 598-606.]

A Dual Post-Treatment Method for Improving the Performance of Ternary NiMgO Semiconductor Interfacial Layers and Their Organic Solar Cells

He, Xinrui; Cai, Lina; Chen, Hansheng; Yin, Pan; Yin, Zhigang*; Zheng, Qingdong*

Acta Chim. Sinica 2022, 80(5), 581-589

A new dual post-treatment method is designed by combining surface rinse with ultraviolet-ozone (UVO) treatment to optimize structures and properties of NiMgO films for photovoltaic applications. Benefiting from the improved energy level alignment, increased transmittance and smoothed surface of NiMgO as a novel hole transport layer derived from the dual post-treatment, the resulted non-fullerene organic solar cells deliver highly improved efficiencies from 5.90% to 13.17%.

Study on the Framework Aluminum Distributions of HMOR Zeolite and Identification of Active Sites for Dimethyl Ether Carbonylation Reaction

Zhang, Jin; Ding, Xiangnong; Liu, Hongchao; Fan, Dong; Xu, Shutao*; Wei, Yingxu; Liu, Zhongmin

Acta Chim. Sinica 2022, 80(5), 590-597

The framework Al sites of MOR zeolite has been distinguished by 2D ^{27}Al multiple-quantum magic angle spinning nuclear magnetic resonance (MQ MAS NMR) technique that illuminates the active site for dimethyl ether carbonylation reaction.

Nucleation of Water Clusters in Gas Phase: A Computational Study Based on Neural Network Potential and Enhanced Sampling

Xu, Sen; Wu, Liling; Li, Zhenyu*

Acta Chim. Sinica 2022, 80(5), 598-606

Monte Carlo simulations with a neural network potential reveal the gas phase nucleation behavior of water molecules. A transition from two-dimensional ring structures to three-dimensional hydrogen bond network structures starts when the cluster size increases from 4 to 5, although the ground-state structure of $(\text{H}_2\text{O})_5$ remains to be a two-dimensional ring.

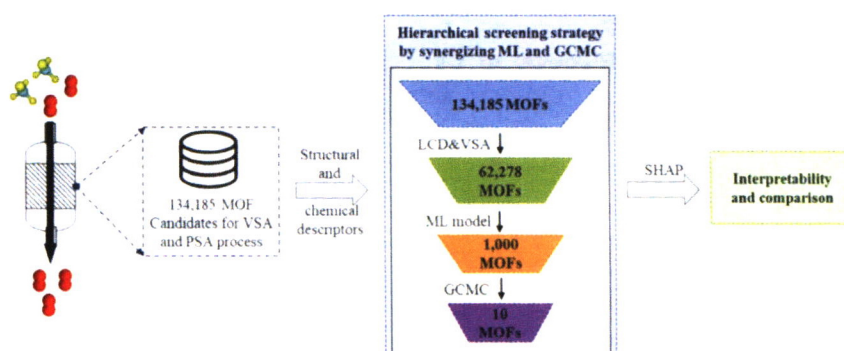

Photocatalytic Oxidation of 5-Hydroxymethylfurfural Selectively into 2,5-Diformylfuran with CdS Nanotube

Shu, Heng; Bao, Yide-Rigen; Na, Yong*

Acta Chim. Sinica 2022, 80(5), 607-613

High-Throughput Computational Screening of Metal-Organic Frameworks for CH₄/H₂ Separation by Synergizing Machine Learning and Molecular Simulation

Wang, Shihui; Xue, Xiaoyu; Cheng, Min; Chen, Shaochen; Liu, Chong; Zhou, Li; Bi, Kexin; Ji, Xu*

Acta Chim. Sinica 2022, 80(5), 614-624

This work proposed a hierarchical screening strategy by synergizing machine learning and molecular simulation to identify the optimal adsorbents for CH₄/H₂ separation under vacuum swing adsorption and pressure swing adsorption conditions from 134185 hypothetical metal-organic frameworks (MOFs). Interpretability was also provided to explore the transferability potential of the developed model.

Template-Based Controlled Synthesis and Bioapplication of AgInSe₂:Zn²⁺ Near-Infrared Luminescent Quantum Dots

Lian, Wei; Fang, Zekai; Tu, Datao*; Li, Jiayao; Han, Siyuan; Li, Renfu; Shang, Xiaoying; Chen, Xueyuan*

Acta Chim. Sinica 2022, 80(5), 625-632

Monodisperse AgInSe₂:Zn²⁺ quantum dots (QDs) with an absolute quantum yield of 42.5% are successfully synthesized via a facile cation exchange strategy from the In₂Se₃:Zn²⁺ template. After biotinylation, these near-infrared luminescent AgInSe₂:Zn²⁺ nanoprobes are employed for targeted cancer cell imaging.

$\text{Rb}_2\text{MGe}_3\text{S}_8$ (M=Zn, Cd): Non-Centrosymmetry Transformation Led by Structure Change of $[\text{MGe}_3\text{S}_8]^{2-}$ Unit

Chai, Xiandan; Chen, Wenfa; Yan, Qiunan; Liu, Binwen; Jiang, Xiaoming*; Guo, Guocong*

Acta Chim. Sinica 2022, 80(5), 633-639

By analyzing the basic building units $[\text{MGe}_3\text{S}_8]^{2-}$ (M=Zn, Cd) of the two chalcogenides, the transition from the centrosymmetry to the non-centrosymmetry was explored. And the theoretical calculations were also performed to deepen our understanding of the origin of nonlinear optical efficiency in $\text{Rb}_2\text{CdGe}_3\text{S}_8$.

Two New Three-Dimensional Lanthanide Metal-organic Frameworks for the Highly Efficient Removal of Cs^+ Ions

Lü, Tiantian; Ma, Wen; Zhan, Dongsun; Zou, Yanmin; Li, Jilong; Feng, Meiling*; Huang, Xiaoying

Acta Chim. Sinica 2022, 80(5), 640-646

The new lanthanide metal-organic frameworks with high water stability can efficiently and selectively remove Cs^+ ions even in the presence of interfering ions. The removal mechanism was elucidated by single-crystal structure analysis and various characterizations attributing to the ion-exchange between Cs^+ ions and $[\text{Me}_2\text{NH}_2]^+$, $[\text{H}_3\text{O}]^+$ in the channels.

Circularly Polarized Luminescence and Dynamic Regulation Based on the co-Assembly of *L/D*-Lysine Hydrochloride and Photoactivated AIE Molecules

Feng, Xicheng; Zhu, Liangliang; Yue, Bingbing*

Acta Chim. Sinica 2022, 80(5), 647-651

The photoactivated aggregation-induced emission (AIE) molecule (M-1) and *L/D*-Lysine hydrochloride (*L/D*-Lys) co-assemble to form chiral supramolecular *L/D*-Lys@M-1 under the action of hydrogen bond, and realize dynamically controllable circularly polarized luminescence (CPL).

Perspective

Nano-Tracing: Recent Progress in Sourcing Tracing Technology of Nanoparticles

Yang, Xuezhi; Lu, Dawei; Wang, Weichao; Yang, Hang; Liu, Qian*; Jiang, Guibin

Acta Chim. Sinica **2022**, *80*(5), 652-658

Tracing the sources and environmental transformation processes of nanoparticles (NPs) is the prerequisite for their risk assessment and pollution control. The recent progress and the future challenges in the area of source tracing technologies of NPs were reviewed.

Review

Advances in Pretreatments for Electroless Copper Plating on Polymer Materials

Zheng, Anni; Jin, Lei; Yang, Jiaqiang; Li, Weiqing; Wang, Zhaoyun; Yang, Fangzu*; Zhan, Dongping*; Tian, Zhongqun

Acta Chim. Sinica **2022**, *80*(5), 659-667

The properties, compositions and applications of different polymer materials, as well as its pretreatment methods before electroless copper plating have been detailedly overviewed, which can provide guidance for the electroless copper plating on the non-conductive polymer materials' surfaces.

Sepsis Treatment Strategies Based on Nanomaterials

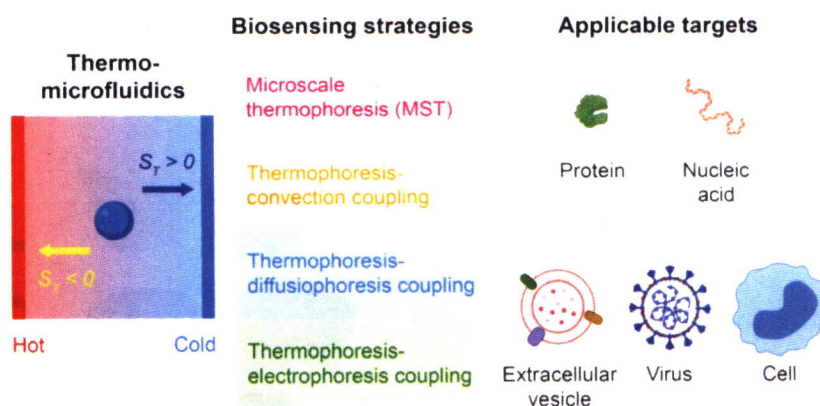

Li, Zhen; Chen, Jie; Tian, Huayu*; Chen, Xuesi

Acta Chim. Sinica **2022**, *80*(5), 668-678

In this review, the latest treatment of sepsis based on nanomaterials is reviewed in detail from various perspectives, including antibacterial, scavenging of reactive oxygen species and dangerous molecules. Then, the problems and challenges facing the treatment of sepsis using nanomaterials are further summarized and discussed. It is anticipated to provide new ideas and solutions for the clinical treatment of sepsis.

Thermomicrofluidic Biosensing Systems

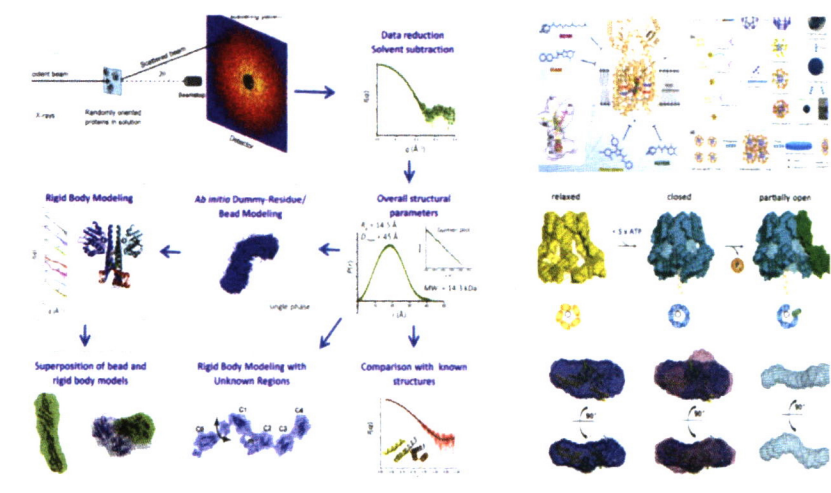

Liu, Chao; Tian, Fei; Deng, Jinqi; Sun, Jiashu*

Acta Chim. Sinica **2022**, *80*(5), 679-689

Different thermomicrofluidic biosensing strategies, including microscale thermophoresis (MST), thermophoresis-convection coupling, thermophoresis-diffusiophoresis coupling and thermophoresis-electrophoresis coupling, were presented. The fundamentals, features, and applications of these strategies in detecting biomolecules (protein, nucleic acids, etc.) and biological micro/nanoparticles (extracellular vesicles, viral particles, cells, etc.) were summarized. The challenge and future directions for the application of thermomicrofluidic biosensing in biomedical detection were discussed.

Solution Small-Angle Scattering in Soft Matter: Application and Prospective

Solution small-angle scattering (SAS) is a powerful tool for elucidating the structural properties of soft matter systems. In recent years, solution SAS techniques have had versatile applications in several research fields, especially in structural biology and in probing self-assembling nanomaterials. Probing the structure of materials at micro- and nano-scales provide an insight on the macroscopic properties of the material. The high throughput and fast time resolution offered by SAS includes X-ray scattering (SAXS) in combination with the neutron penetrating ability in Neutron scattering (SANS) can offer a great potential to cover different soft-matter systems and processes (*i.e.* probing the kinetic of self-assembly). Given the potential offered by the next generation X-ray and Neutron sources, further developments in this field are expected, with a proliferation of solution SAS applications.
