Cover Story Boundary of Rationality

The state in recent years to strengthen investment in fixed assets, especially in high-speed rail, bridges, highways and the wind power project, drive the crane greatly in demand. But the crane prices relatively high, especially in large tonnage crawler cranes and all terrain crane, customers often do not have the strength of the full amount to buy, credit sales, such as mortgage banking and finance leases, provide customers a shortcut to purchase.

Incomplete investigation, recently the credit sales proportion in domestic crane market has more than 80%, and the scale is expanding. Credit sales model has become an important way to boost the development of the construction machinery industry, and used by more and more construction machinery enterprises. It is worth noting that the high credit sales penetration has greatly promoted the sales, but also accumulated a large amount of accounts receivable.

Market Survey

Construction Machinery Market Survey of Anhui

Anhui is a province in the People's Republic of China. Located in eastern China across the basins of the Yangtze River and the Huai River, it borders Jiangsu to the east, Zhejiang to the southeast, Jiangxi to the south, Hubei to the southwest, Henan to the northwest, and Shandong for a tiny section in the north. The capital of the province is Hefei.

The province of Anhui was formed in the seventeenth century. Before then, there was no coherent concept of "Anhui". Northern Anhui was firmly a part of the North China Plain in terms of culture, together with modern-day Henan province. Central Anhui constituted most of the fertile and densely-populated Huai He River watershed. Southern Anhui, along the Yangtze, was closer to Hubei and southern Jiangsu provinces in culture. Finally, the hills of southeastern Anhui formed a unique and distinct cultural sphere of its own.

P80

Art of Marketing

The Rational Development and Utilization of Customer Resources

Construction machinery agents must change the way of managing users from simple "one-to-one" to systematically management, analysis and built user marketing network, to achieve "concentric circles of network marketing". With the socio-economic development, a region relative user density significantly improved, the absolute number of users has increased. At the same time, transferred from other industries and construction machinery industry also increased, taking into account the agents limited human resources, sales of energy is limited, generally a salesman face of about 100 users have been saturated energy, not to mention found, train new users.
