20 COVER STORY

Rescue Equipment in China Storm Chaos

Violent storm in China that packed gale-force winds and hail killed and injured hundreds of people as it flattened power lines, overturned cars and ripped roofs off houses. Pictures online showed injured people lying amid destroyed houses, overturned cars and split tree trunks. Rescue equipments today become more intelligent and advanced that capable of many rescue jobs which pure manpower cannot finish.

Why This Colorado Excavation Contractor Refuses to Call His Staff "Employees"

Although it's often said that you can't please everyone all the time, Bradley Grubaugh says he's sure going to try. With 35 years of construction experience, Bradley knew a thing or two about how to keep both clients and employees happy when he formed Bradley Excavating in Colorado Springs in 2002. With a scope of work that includes site development and demolition for a range of clients, including federal entities, Bradley and his team work hard to ensure jobs run smoothly for their clients, such as Doug Woody with Bryan Construction. "They're over and above on customer service," Woody says. "They're easy to work with and they understand relationships." Woody gives an example: When approached to work on an Operation Bahamas, Turks and Caicos hangar for the U.S. Coast Guard on a sparsely-inhabited Bahamian island, Bradley was ready to go, jumping on a plane with Woody's supervisor.

Terex AWP Holds Grand Opening of Enlarged Facility in China

Drummers and dragon dancers dazzled attendees celebrating the official grand opening of the enlarged facility in Changzhou. To serve as the product development, parts distribution and service center for China, it is part of Terex AWP's global expansion plan to produce local products for local markets. The facility offers a massive factory floor designed to employ the lean production methods of the Terex Business System. It also includes a showroom to display finished products and a training area for customers, dealers and team members.

56 FEATUE

A Successful Upgrade

Shell Heat Transfer Oil S2 is based on carefully selected highly refined mineral oils and resists oil cracking, oxidation and thickening. This provides extended oil life, provided efficient fluid heating and good pump circulation is ensured, such that film temperatures on the heater surface do not exceed the limits above. Low viscosity enables excellent fluidity and heat transfer over a wide temperature range. Shell Heat Transfer Oil S2 also has a low vapor pressure so resists cracking. This minimizes the formation of volatile decomposition products; these would require recovery via expansion chamber and condensate collector.
