COVER STORY

On the 2016 interim annual report of China construction machinery industry

The recent disclosure of 2016 interim annual report has shown a yearly decline of China construction machinery industry, with the total turnover amounting to 43.9 billion yuan for 16 listed companies, a 11% decrease over last year. The total loss of the 16 listed companies have reached 741 million yuan, more than 169 million yuan compared to last year, a new record high in decline for the past six years. The two consecutive years business slump since last year once again bombarded the uncertain future of the gloomy industry.

44 FEATUE

China equipment in ASEAN market

The ASEAN market has for long caught China machine-makers eyes as it has become a more and more important overseas market for China exports. China's industrial advantage and huge market demand from ASEAN will be a solid foundation for business cooperation. With the slowing-down economic growth, China machinery industry went into low gear and became aspired to seize more overseas business opportunities. It is conducive to implementing the strategy of "going globe-wide", and to participating in international competition and cooperation in a broader world.

52 FEATUE

Access future tied to leveraging the right technologies, says JLG's Loux

"The long-term success of our industry relies on our ability to continuously improve upon the safe operation of our machines. Without question, technology is a great enabler of advanced safety solutions," Loux said during his keynote address, titled "The Future of the Access Industry is now." Loux's presence at the conference underscores JLG's commitment to meeting the growing demands for access equipment in Asia and other emerging markets. JLG is a leading global manufacturer of aerial work platforms and telescopic material handlers. The company also provides industry-leading aftermarket sales and service support to customers throughout the region.

62 GLOBAL

The future of work zone safety: Intelligent transportation systems and smarter project coordination

Construction work zones are some of the most brightly designated areas along roads and highways, even rivaling the ubiquitous billboard. Unfortunately, that visibility hasn't stopped accidents in what the public assumes is a cordoned-off haven. In 2014, 116 workers deaths occurred in road construction sites, according to the latest figures available from the U.S. Bureau of Labor Statistics' Census of Fatal Occupational Injuries. The average yearly worker death figure is 121 over a 10-year period, from 2005 to 2014. Distracted driving gets much of the blame for work zone accidents, since motorists have multiple attention-getting options in their vehicles. In fact, that variable is the focus of many national and statewide awareness campaigns. This year's theme for 17th annual National Work Zone Safety Awareness Week was "Don't be THAT driver: Work on Safety, Get Home Safely, Every Day." That driver, as the campaign describes via silhouette imagery, is the driver who texts, eats, puts on makeup or has a bout of road rage.
