## TRANSACTIONS OF JIANGSU PROVINCIAL SOCIETY OF NAVAL ARCHITECTURE AND MARINE ENGINEERING

### CONTENTS

**JS 2018-5-01 Research on General Arrangement of a 76 m Ro-ro Passenger Ship with Two-way Navigation** ..... **SU Bo, WANG Li, LUAN Deyun(1)**

*In order to solve the problems of the traditional one-way ro-ro passenger ship, such as the need to turn the bow in port to increase the departure time, and the insecurity of vehicles back off roll on/roll off ship, a 76 m ro-ro passenger ship two-way navigation was designed. The ship has four decks, which can accommodate 499 passengers; the bow and stern is symmetrical, the wheel house with 360 degree angle of view is located in the middle of the hull; and the service speed of 12 kn can be achieved by using four main engines and four z-propeller axle thrusters. In addition, the escape schemes of 499 passengers and 17 crew members are analyzed according to the method required by rules, the results meet the requirements of escape time of rules of passenger ships. The results show that the layout features of the ship type can ensure the ship does not need to turn its bow when it is docking or leaving the port, and the straight driveway on the ship can facilitate the vehicle to roll on and roll off the ship.*

**JS 2018-5-02 Research and Test Method on Low Temperature Resistance of Polar Lifeboat** ..... **CHEN Zhitong, ZHANG Yi, GUO Jiang, GUAN Yifeng(6)**

*In order to solve the problem that the lifeboat developed can not meet the design and manufacture of the polar environment temperature (less than or equal to -50°C) in domestic, a prototype of polar lifeboat suitable for the polar low temperature environment was designed and manufactured. The low temperature resistance of the prototype was studied, including the low temperature start-up performance of the engine, the low temperature release capacity of the hook device, the opening capacity of the door and hatch, and the necessary low temperature environment (-50°C) was tested and verified. The test results show that the engine, hook, door, hatch cover and navigation window of the lifeboat prototype can work normally under the polar environment temperature, thus ensuring the normal lifesaving ability of polar lifeboat in the polar low temperature environment, so as to provide a reference for the development of similar products.*

**JS 2018-5-03 Ship Four Degree of Freedom Manoeuvring Motion Simulation Based on MMG Standard** ..... **HUANG Rongrong, LI Xing(9)**

**JS 2018-5-04 Reforming Design on a 75.8 m Coastal Deck Barge** ..... **LI Xiaoye(12)**

**JS 2018-5-09 Electrical Equipment Layout and Cable Separation Scheme of a 227 m Deep-sea Mining Vessel** ..... **ZENG Chen(28)**

*Taking the world's first deep-sea mining vessel, 227 m deep-sea mining vessel as the research object, a scheme of electrical equipment layout and cable separation based on the requirement of "DPS2, EHSF" classification symbol redundancy requirement is proposed. According to the design principle of three redundant groups, the main structure of the ship is set up. The cable connection between the redundant groups adopts the method of left-right crossing, which can solve the problem of separation and isolation between the standby system and the main system required by the "DPS2, EHSF" classification symbol. In the aspect of cable separation, the traditional method of piercing pipes or temporarily adding channels in the later cable laying process is abandoned, in the early stage of hull structure design, three independent main cable channels are separated, which can meet the requirements of specifications and reduce the design conflict and the difficulty of site construction.*

**JS 2018-5-10 Ship Distribution Monitoring System Based on Distributed Acquisition Technology** ..... **BAO Bin(32)**

**JS 2018-5-11 Research on Man-hour Management Technology of Ship Production Design** ..... **YAO Biao, CHEN Ting, ZHANG Lei(35)**
