Vol. 38, No. 6 (Serial 206), December 2021 (Bimonthly)

TRANSACTIONS OF JIANGSU PROVINCIAL SOCIETY OF NAVAL ARCHITECTURE AND MARINE ENGINEERING

CONTENTS

- JS 2021-6-01 Research on High-Efficiency Ship Design Methods Based on Energy-Saving and Emission-Reduction Goals** WANG Xiaohua, WANG Haotian (1)
To design a high - efficiency ship that meets the new emission requirements, through the results of the CFD/pool experiments of the existing ship types, the analysis and comparison are carried out from the perspective of the overall optimization selection of the main dimensions of the different ship types. The different energy efficiency design indices of bulk cargo carriers, container ships, and oil tankers under different design scales are demonstrated, and the basic idea of high-efficiency ship design is finally obtained by selecting the main scale of the ship.
- JS 2021-6-02 Improved Finite Element Algorithm Based on GUIDELINES FOR FATIGUE STRENGTH OF SHIP STRUCTURE** ZHANG Wei, YU Rui (5)
- JS 2021-6-03 Whole Ship Finite Element Analysis of a Channel Emergency Rescue Command Boat** ...
..... ZHANG Yun, ZHANG Yu, XUN Jinbiao (7)
- JS 2021-6-04 Simulation and Analysis of the Superstructure Deck Structural Strength of a 90 m Crane Ship** QIAN Junlin, XIANG Guofei, WANG Qingfeng, XU Xiao (10)
- JS 2021-6-05 Research on the Low-Frequency Radiation Noise Analysis Method of Small-Type Ships** ...
..... SHAO Liang (13)
- JS 2021-6-06 Analysis and Improvement Strategy of SCR Structure Platform Vibration of a 150,000 Ton Oil Tanker** SUN Zeren, ZHOU Hong (16)
- JS 2021-6-07 Design of Refrigerating System for a 143 m Fishery Carrier**
..... TIAN Zhengjun, GU Chen, GUO Yuejiao, WANG Xiangzhen, FENG Guozeng (19)
To ensure that large fishing boats can freeze and store the fish caught by surrounding small fishing boats in time, taking the freezing system of a 143 m fishing transport ship as the research object, the cooling load of each refrigerated compartment is calculated. Then the refrigeration equipment is selected, and the key refrigeration system according to the refrigeration principle and characteristics of the system is designed. Finally, safety protection and automatic control of the refrigeration system are introduced. The results show that the refrigeration system with efficient and environmentally friendly ammonia as the refrigerant can meet the refrigeration needs of each compartment, ensure the refrigeration of the fish in time, and the long-term operating performance of the system is stable, which meets the relevant safety regulations.
- JS 2021-6-08 The Safety Zone System Design Essentials of the Ro-Ro Ships Meeting the Safety Return to Port** WU Lin, ZHANG Huiliang, ZHAO Zibing, ZHANG Hua (23)
- JS 2021-6-09 Application and System Troubleshooting of the Marine Hydraulic System Balance Valve**
..... TANG Chuanchun (26)
- JS 2021-6-10 Ventilation System Design of a Ro-Ro Ship's Ro-Ro Space Based on CFD Calculation**
..... XU Qian, ZHAO Zibing, WU Lin (30)
- JS 2021-6-11 Research on Partitioned Distribution Network for Refrigerated Containers of Large Container Ships** YANG Haijian, LI Yongpeng (33)
To improve the continuity and system redundancy of refrigerated container power distribution of large container ships, a design scheme of partitioned power distribution network is innovatively proposed by taking a domestic first-made 20,000 ton super-large container ship as the research object. According to its design concept, network structure, and equipment configuration of each node, the scheme minimizes the risk of a large number of reefer containers not working properly due to partial power supply interruption in the ship during the construction of the power distribution system of the ship's power station. At the same time, for the electrical design difficulty of the frame value decision of the circuit breaker in the feeder panel, the single circuit breaker can provide power for all refrigerated containers in more than 99.9% of the occasions through the normal distribution mathematical model, and finally a reasonable selection is realized. The practicability and reliability of the design scheme are verified through the operation of the ship owner's actual ship.
- JS 2021-6-12 Development of Insulation Monitoring and Fault Location System for Marine AC Power Network** CHEN Songtao, WANG Zhimin (36)
- JS 2021-6-13 Comparative Research on Static Balance Test Methods of Propellers** ... WU Chuantao (39)
- JS 2021-6-14 Calculation Analysis and Inspection Key Points of the Displacement of Steering Gear Safety Valve** WANG Zhaohui (43)
