CONTENTS

Research Reports

Lagrangian finite point method for two-dimensional compressible flows	SUN Shunkai (166)
Improvement on window embedment technology with high order conservative remapping	 ZHANG Yufei, CHEN Haixin, FU Song (173)
An adaptive explicit time integration algorithm for hydrodynamic equations and application in ICF	 LIU Qingkai, XU Xiaowen, WU Junfeng (180)
Parallel finite element algorithms based on fully overlapping domain decomposition for time-dependent Navier-Stokes equations	SHANG Yueqiang, HE Yinnian (187)
High-order hybrid DG/FV schemes based on “static re-construction” and “dynamic re-construction” for two-dimensional conservation law	ZHANG Laiping, LIU Wei, HE Lixin, HE Xin, DENG Xiaogang (198)
Numerical schemes for detonation front on curvature on unstructured quadrilateral meshes	 CHENG Junxia (206)
Numerical simulation of hypervelocity impact with subdomains in SPH computation	 BIAN Liang, WANG Xiaojun, ZHANG Jie, ZHAO Kai (212)
A general study on post-processing of smoothed particle hydrodynamics	 ZHENG Jun, YU Kaiping, WEI Yingjie, ZHANG Jiazhong (218)
A coupling algorithm of finite element and smoothed particle hydrodynamics	 XIAO Yihua, HU Dean, HAN Xu (224)
Lattice Boltzmann simulation of flow in a micro-channel	 ZHANG Renliang, DI Qinfeng, WANG Xinliang, GU Chunyuan, WANG Wenchang (229)
A computational method for productivity of horizontal well in naturally fractured reservoirs	 CHENG Linsong, PI Jian, LIAN Peiqing, HUANG Shijun (236)
Two-step interpolation method for multilevel fast multipole algorithm	 XIANG Daopu, ZHOU Dongming, HE Jianguo (242)
An arithmetic for filtrating high-frequency noise in particle-in-cell simulation	 LIU Dagang, ZHOU Jun, YANG Chao, MENG Lin (249)
Electron energy distribution in radio-frequency CH_4 plasma	 LV Shaobo, LIN Zeng, WANG Qing, BA Dechun (258)
High-order CIP numerical method and application in Vlasov-Poisson equation	 FU Deyue, PENG Xiaodong (267)
Self-optimizing cumulative inversion of particle size distribution with photon correlation spectroscopy	 QIU Jian, YANG Guanling, HAN Peng, CHEN Chaoxiong (274)
Symplectic Fourier pseudo-spectral schemes for Klein-Gordon-Schrödinger equation	 WANG Lan, MA Yuanping, KONG Linghua, DUAN Yali (275)
An algorithm for two-dimensional discrete Hartley transform	 DONG Zhifang, WU Jiasong, SHU Huazhong (288)
Structure of liquid aluminum oxide: A molecular dynamics study	 WU Yanning, WANG Liping, ZHU Yiqiang, HUANG Yinsheng, WANG Daimu (294)
Electronic transport in molecular device of isomers	LIU Ruijin, LI Zongliang, WANG Chuankui (300)
Filtering features of solid-fluid rectangular doping phononic crystals	Liu Qineng (305)
Simulation and fabrication of high-voltage 4H-SiC PiN diode with JTE	 ZHANG Fasheng, ZHANG Yuming (306)
A cascading failure model for power systems	ZHOU Haiping, CAI Shaohong (316)
