|                                                                                                                                                                                                                                               |            |
|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------|
| <b>Aerodynamic shape and drag scaling law of a flexible fibre in a flowing medium</b><br>Bo-Hua Sun , Xiao-Lin Guo                                                                                                                            | <b>159</b> |
| <b>An operator methodology for the global dynamic analysis of stochastic nonlinear systems</b><br>Kaio C. B. Benedetti, Paulo B. Goncalves, Stefano Lenci, Giuseppe Rega                                                                      | <b>164</b> |
| <b>Numerical optimisation of a classical stochastic system for targeted energy transfer</b><br>Kaio C. B. Benedetti, Paulo B. Goncalves, Stefano Lenci, Giuseppe Rega                                                                         | <b>170</b> |
| <b>Computer simulation of Cu: AlOOH/water in a microchannel heat sink using a porous media technique and solved by numerical analysis AGM and FEM</b><br>S.A. Abdollahi, P. Jalili, B. Jalili, H. Nourozpour, Y. Safari, P. Pasha, D.D. Ganji | <b>177</b> |
| <b>Predicting solutions of the stochastic fractional order dynamical system using machine learning</b><br>Zi-Fei Lin, Jia-Li Zhao, Yan-Ming Liang, Jiao-Rui Li                                                                                | <b>188</b> |
| <b>Equation governing the probability density evolution of multi-dimensional linear fractional differential systems subject to Gaussian white noise</b><br>Yi Luo, Meng-Ze Lyu, Jian-Bing Chen, Pol D. Spanos                                 | <b>199</b> |
| <b>Sound absorbing properties of spiral metasurfaces inspired by micro-perforated plates</b><br>Han Zhang, Pengxiang Hao, Huilan Wu, Zhenyuan Lin, Chengpeng Hao, Zhengpan Qi, Ning Hu                                                        | <b>209</b> |
| <b>Interactions between a central bubble and a surrounding bubble cluster</b><br>A-Man Zhang, Shi-Min Li , Pu Cui, Shuai Li , Yun-Long Liu                                                                                                    | <b>216</b> |
| <b>Effect of wall friction on oscillation of velocity at the head of the gravity current</b><br>Jinichi Koue                                                                                                                                  | <b>222</b> |
| <b>Parameter identification for a damage phase field model using a physics-informed neural network</b><br>Carlos J.G. Rojas, Jos L. Boldrini, Marco L. Bittencourt                                                                            | <b>229</b> |
| <b>Corrigendum to “Noise colour influence on escape times in nonlinear oscillators - experimental and numerical results” [Theor. App. Mech. Lett. 13 (2023) 100420]</b><br>Thomas Breunung, Balakumar Balachandran                            | <b>247</b> |
