### Enhanced photocatalytic activity by the construction of a $\text{TiO}_2$ /carbon nitride nanosheets heterostructure with high surface area via direct interfacial assembly

Zili Xu<sup>1</sup>, Chuansheng Zhuang<sup>2</sup>, Zhijuan Zou<sup>1</sup>, Jingyu Wang<sup>1,\*</sup>, Xiaochan Xu<sup>1</sup>, and Tianyou Peng<sup>2,\*</sup>

<sup>1</sup> Huazhong University of Science and Technology, China

<sup>2</sup> Wuhan University, China

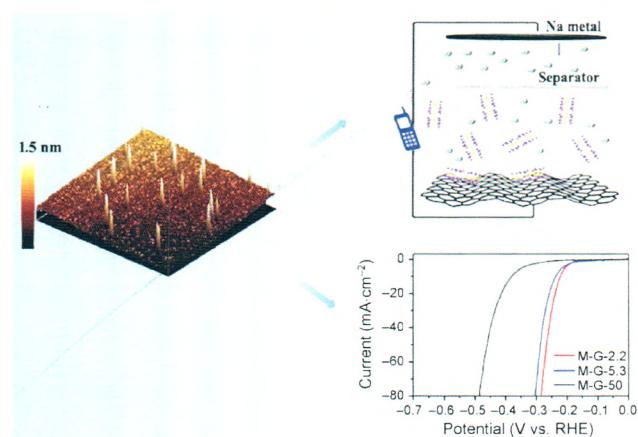

An interfacial assembly strategy has been developed for the construction of  $\text{TiO}_2$  heterostructure modified with carbon nitride nanosheets (CN-NSs). The uniform dispersion of  $\text{TiO}_2$  nanoparticles effectively restrains the re-stacking of ultrathin layers, resulting in a high specific surface area of  $234.0 \text{ m}^2 \cdot \text{g}^{-1}$ , and enhanced photocatalytic efficiency for the degradation of dyes and  $\text{H}_2$  production.

2193–2209

### Size-controlled $\text{MoS}_2$ nanodots supported on reduced graphene oxide for hydrogen evolution reaction and sodium-ion batteries

Weiyi Sun, Pan Li, Xue Liu, Jiajia Shi, Hongming Sun, Zhanliang Tao\*, Fujun Li, and Jun Chen

Nankai University, China

$\text{MoS}_2$  nanodots supported on graphene, synthesized via heating-up and ultrasonication methods, demonstrate promising performances as bifunctional materials for batteries and electrocatalysis.

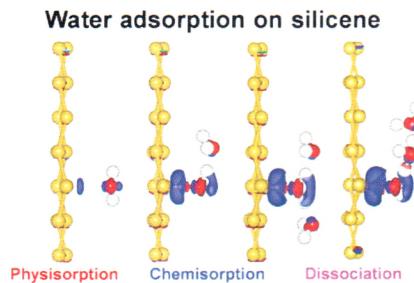

2210–2222

## Water on silicene: A hydrogen bond-autocatalyzed physisorption–chemisorption–dissociation transition

Wei Hu<sup>1,2,\*</sup>, Zhenyu Li<sup>1</sup>, and Jinlong Yang<sup>1,\*</sup>

<sup>1</sup> University of Science and Technology of China, China

<sup>2</sup> Lawrence Berkeley National Laboratory, USA

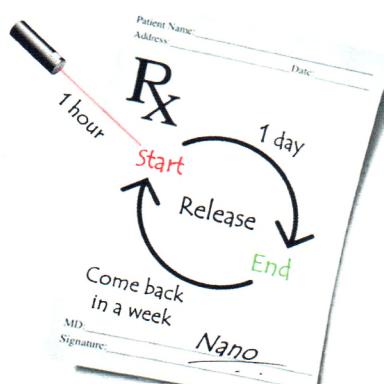

Water monomers, dimers, and trimers show different adsorption properties on silicene. On silicene, hydrogen bonding in dimers and trimers of water induces a transition from physisorption to chemisorption and then to dissociation. Unlike other 2D materials, silicene is hydrophilic owing to this hydrogen bond autocatalytic effect.

2223-2233

## **“Takeaway” drug delivery: A new nanomedical paradigm**

Elena González-Domínguez, Benito Rodríguez-González,  
Moisés Pérez-Lorenzo\*, and Miguel A. Correa-Duarte\*

Universidade de Vigo, Spain

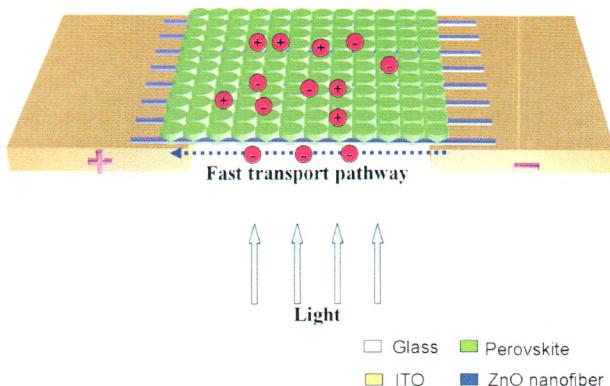

A far-ranging approach aiming at developing a new generation of drug delivery systems applicable beyond the point-of-care setting has been developed. This strategy shows great promise in those scenarios requiring a lengthy and yet switchable release of therapeutic agents.

2234–2243

**High-performance UV-vis photodetectors based on electrospun ZnO nanofiber-solution processed perovskite hybrid structures**

Fengren Cao, Wei Tian, Bangkai Gu, Yulong Ma, Hao Lu, and Liang Li\*

Soochow University, China

A high-performance photodetector based on a hybrid structure consisting of electrospun ZnO nanofibers and perovskite films is demonstrated. Compared to pristine ZnO or perovskite, the hybrid photodetector shows increased on-off ratio, faster response speed, and higher responsivity and detectivity.

## 2244–2256

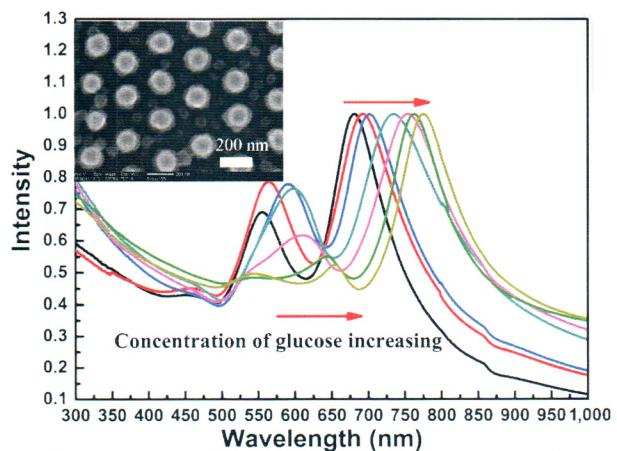

**Functionalized periodic Au@MOFs nanoparticle arrays as biosensors for dual-channel detection through the complementary effect of SPR and diffraction peaks**

Lifeng Hang<sup>1,2</sup>, Fei Zhou<sup>1</sup>, Dandan Men<sup>1,2</sup>, Hulin Li<sup>1,2</sup>, Xinyang Li<sup>1</sup>, Honghua Zhang<sup>1</sup>, Guangqiang Liu<sup>1</sup>, Weiping Cai<sup>1</sup>, Cuncheng Li<sup>3</sup>, and Yue Li<sup>1,2,\*</sup>

<sup>1</sup> Institute of Solid State Physics, Chinese Academy of Sciences, China

<sup>2</sup> University of Science and Technology of China, China

<sup>3</sup> University of Jinan, China

Au@MIL-100(Fe) NP arrays modified with 3-aminophenylboronic acid hemisulfate exhibited sensitive responses to different glucose concentrations with good selectivity. The surface plasma resonance and diffraction peaks exhibited satisfactory complementary sensitivity to glucose detection in different concentration regions.

## 2257–2270

## Non-FCC rich Au crystallites exhibiting unusual catalytic activity

## Toward integrated detection and graphene-based removal of contaminants in a lab-on-a-chip platform

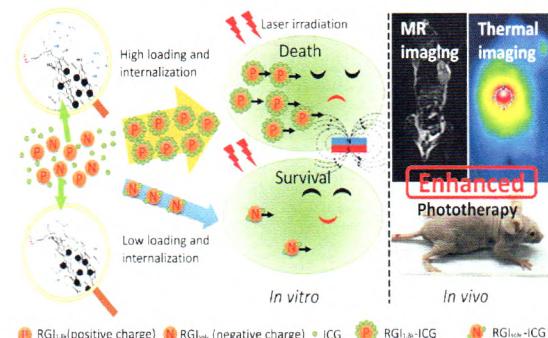

Andrzej Chatupniak<sup>1</sup> and Arben Merkoçi<sup>1,2,\*</sup>

<sup>1</sup> Campus UAB, Spain

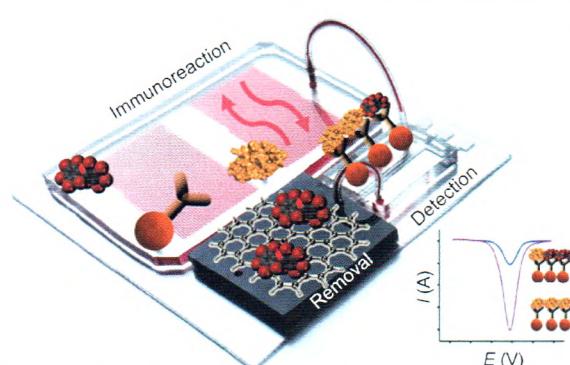

<sup>2</sup> ICREA, Spain

Penta-twinned bipyramidal Au microcrystallites with a highly corrugated morphology host unconventional non-FCC Au phases. The mole-fraction of non-face-centered cubic (non-FCC) Au is varied simply by changing the shape-directing Ag(I) content and the thermolysis temperature. The highest mole fraction of non-FCC Au achieved was 85%. The strained non-FCC phases obtained exhibited nearly three orders of magnitude higher catalytic activity compared to that from the FCC phase or from an uncatalyzed reaction. This catalytic improvement is due to the higher d-band energy associated with the non-FCC phases.

First, we prepared the positively charged reduced graphene oxide anchoring iron oxide (RGI) modified by 1.8 kDa polyethylenimine (RGI<sub>1.8k</sub>), which could load more indocyanine green (ICG) molecules and could be more effectively internalized into the cells than the negatively charged RGI synthesized by a solvothermal method (RGI<sub>solv.</sub>). The resulting RGI<sub>1.8k</sub>-ICG showed excellent phototherapy, magnetic resonance imaging, and thermal imaging with the help of magnetic targeting *in vitro* and *in vivo*.

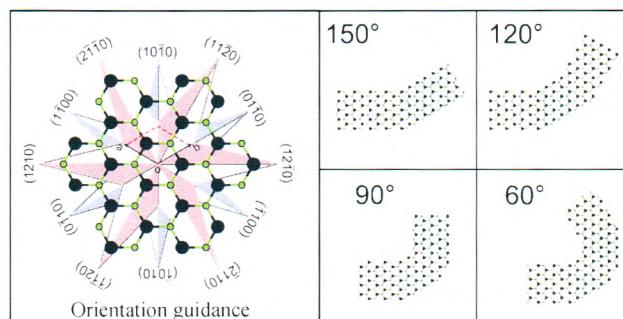

This work presents a novel approach for in-chip electrochemical detection of polybrominated diphenyl ethers and its removal using a graphene-based composite.

2296–2310

## Unravelling a solution-based formation of single-crystalline kinked wurtzite nanowires: The case of MnSe

Xinyi Yang, Bo Zhou, Chuang Liu, Yongming Sui, Guanjun Xiao, Yingjin Wei, Xin Wang, and Bo Zou\*

Jilin University, China

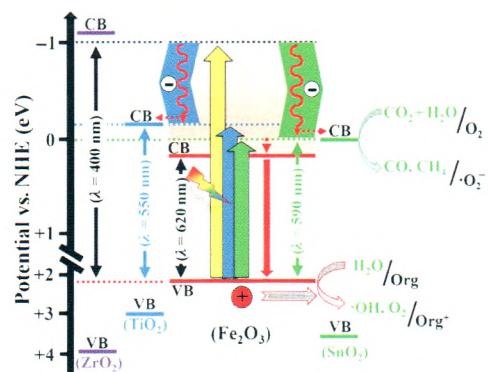

A rational strategy for nonpolar axial-oriented growth and switching was developed to sculpt single-crystalline kinked wurtzite MnSe nanowires in a facile solution-based procedure. The ability to continuously switch the nonpolar axial-growth orientation allowed us to craft the multiply kinking landscape.

## 2311–2320

### Prolonged lifetime and enhanced separation of photo-generated charges of nanosized $\alpha$ - $\text{Fe}_2\text{O}_3$ by coupling $\text{SnO}_2$ for efficient visible-light photocatalysis to convert $\text{CO}_2$ and degrade acetaldehyde

Zhijun Li, Peng Luan, Xuliang Zhang, Yang Qu\*, Fazal Raziq, Jinshuang Wang, and Liqiang Jing\*

Heilongjiang University, China

The lifetime and separation of photogenerated charges of  $\alpha$ - $\text{Fe}_2\text{O}_3$  increased after coupling this oxide with an appropriate amount of  $\text{SnO}_2$ , which acts as a proper energy platform for accepting high-energy-level electrons from  $\text{Fe}_2\text{O}_3$  under visible-light irradiation and as a catalyst for the reduction of  $\text{CO}_2$  and  $\text{O}_2$ , leading to greatly enhanced visible-light photocatalytic activities for  $\text{CO}_2$  reduction and acetaldehyde degradation.

## 2321–2331

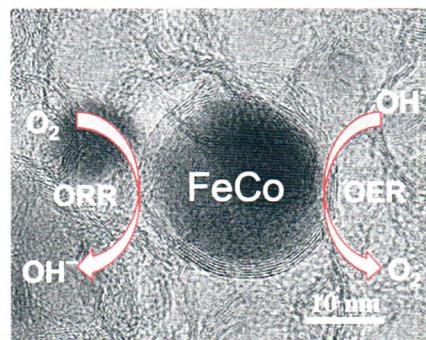

### Facile synthesis of $\text{FeCo}@\text{NC}$ core–shell nanospheres supported on graphene as an efficient bifunctional oxygen electrocatalyst

Nan Wu<sup>1</sup>, Yongpeng Lei<sup>1,\*</sup>, Qichen Wang<sup>1,2</sup>, Bing Wang<sup>1</sup>, Cheng Han<sup>1</sup>, and Yingde Wang<sup>1,3,\*</sup>

<sup>1</sup> National University of Defense Technology, China

<sup>2</sup> Central South University of Forestry and Technology, China

<sup>3</sup> Wuhan Textile University, China

An electrocatalyst consisting of  $\text{FeCo}@\text{C}$  core–shell nanospheres and hollow carbon spheres supported on graphene was generated by one-step pyrolysis of carbon nitride and acetylacetone. The composite shows remarkably high activity as a bifunctional electrocatalyst for the oxygen reduction and oxygen evolution reactions.

## 2332–2343

## Atomic-scale observation of a two-stage oxidation process in Cu<sub>2</sub>O

Huihui Liu<sup>1</sup>, He Zheng<sup>1</sup>, Lei Li<sup>1</sup>, Huaping Sheng<sup>1</sup>, Shuangfeng Jia<sup>1,\*</sup>, Fan Cao<sup>1</sup>, Xi Liu<sup>1,2</sup>, Boyun Chen<sup>1,3</sup>, Ru Xing<sup>4</sup>, Dongshan Zhao<sup>1</sup>, and Jianbo Wang<sup>1,5,\*</sup>

<sup>1</sup> University of Science and Technology of China, China

<sup>2</sup> COMSATS Institute of Information Technology, Pakistan

Integrated nanoplatform of magnetic targeting, MRI, and dual-modal radical-/PTT cancer therapy

A multifunctional cancer therapeutic nanoplatform integrates magnetic targeting, magnetic resonance imaging (MRI), and photothermal and radical therapy.

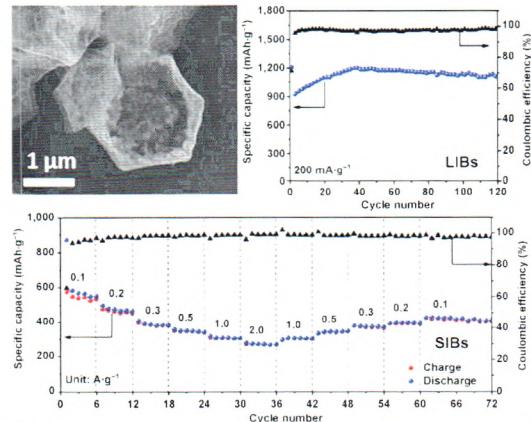

## 2351–2363

### Interface-modulated fabrication of hierarchical yolk–shell Co<sub>3</sub>O<sub>4</sub>/C dodecahedrons as stable anodes for lithium and sodium storage

Yuzhu Wu<sup>1</sup>, Jiashen Meng<sup>1</sup>, Qi Li<sup>1,\*</sup>, Chaojiang Niu<sup>1</sup>, Xuanpeng Wang<sup>1</sup>, Wei Yang<sup>1</sup>, Wei Li<sup>1</sup>, and Liqiang Mai<sup>1,2,\*</sup>

<sup>1</sup> Wuhan University of Technology, China

<sup>2</sup> University of California, Berkeley, USA

A facile interface-modulated method is developed to synthesize carbon-based Co<sub>3</sub>O<sub>4</sub> composites with a yolk–shell structure by controlling the heat-treatment process. Results reveal that the yolk–shell Co<sub>3</sub>O<sub>4</sub>/C dodecahedrons exhibit a high specific capacity, excellent cycling performance, and outstanding rate capability as anodes for lithium-ion batteries and sodium-ion batteries.

## 2364–2376

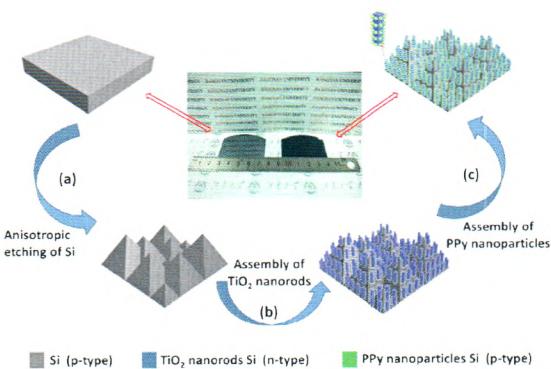

## Fabrication of 3D biomimetic composite coating with broadband antireflection, superhydrophilicity, and double p-n heterojunctions

Gang Shi<sup>1</sup>, Xin Zhang<sup>1</sup>, Jianhua Li<sup>1</sup>, Haiyan Zhu<sup>1</sup>, Ying Li<sup>1,\*</sup>, Liping Zhang<sup>1</sup>, Caihua Ni<sup>1</sup>, and Lifeng Chi<sup>2,3,\*</sup>

2386–2394

## Decoupling co-existing surface plasmon polariton (SPP) modes in a nanowire plasmonic waveguide for quantitative mode analysis

Sanggon Kim, Sabrina Bailey, Ming Liu, and Ruoxue Yan\*

University of California, Riverside, USA

2395–2404

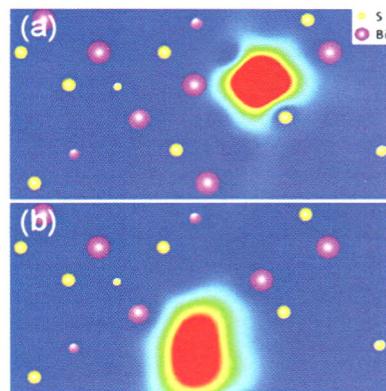

Different surface plasmon polariton modes that are simultaneously excited in a Ag nanowire waveguide can be distinguished using an interference method, and their propagation parameters are measured separately for the first time.

### Correlation between types of defects/vacancies of $\text{Bi}_2\text{S}_3$ nanostructures and their transient photocurrent

Mingyang Liu<sup>1</sup>, Luqing Wang<sup>1</sup>, Pei Dong<sup>1</sup>, Liangliang Dong<sup>1</sup>, Xifan Wang<sup>1</sup>, Jarin Joyner<sup>1</sup>, Xiangjian Wan<sup>2</sup>, Boris I. Yakobson<sup>1,\*</sup>, Robert Vajtai<sup>1,\*</sup>, Pulickel Ajayan<sup>1</sup>, and Pol Spanos<sup>1,\*</sup>

<sup>1</sup> Rice University, USA

<sup>2</sup> Nankai University, China

Correlation between the transient photocurrent of  $\text{Bi}_2\text{S}_3$  microspheres with nanorod assemblies and the types and concentrations of their defects/vacancies were investigated by positron annihilation spectrometry.

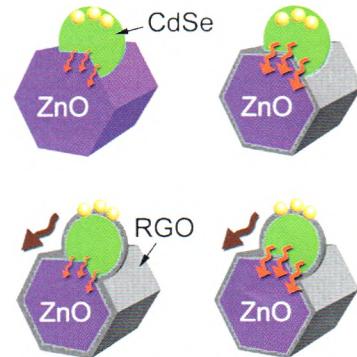

2405–2414

### Design and roles of RGO-wrapping in charge transfer and surface passivation in photoelectrochemical enhancement of cascade-band photoanode

Zhuo Zhang<sup>1</sup>, Mingi Choi<sup>1</sup>, Minki Baek<sup>1</sup>, Insung Hwang<sup>1</sup>, Changshin Cho<sup>1</sup>, Zexiang Deng<sup>2</sup>, Jinwoo Lee<sup>1</sup>, and Kijung Yong<sup>1,\*</sup>

<sup>1</sup> POSTECH, Republic of Korea

<sup>2</sup> Sun Yat-Sen University, China

This study elucidates the roles of reduced graphene oxide (RGO) in the charge transfer and surface passivation of photoanodes by the precise design of a RGO-wrapped photoanode and examination of its photoelectrochemical properties.

2415–2430

### Sorafenib delivery nanoplatform based on superparamagnetic iron oxide nanoparticles magnetically targets hepatocellular carcinoma

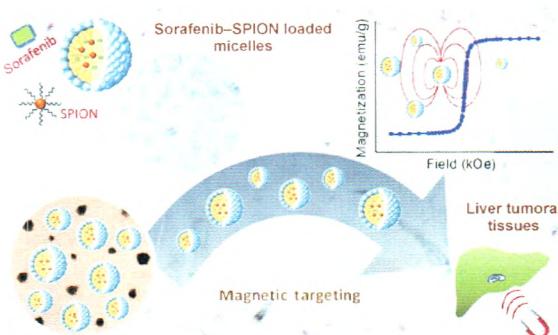

Nicoletta Depalo<sup>1</sup>, Rosa Maria Iacobazzi<sup>2</sup>, Gianpiero Valente<sup>3</sup>, Ilaria Arduino<sup>3</sup>, Silvia Villa<sup>4</sup>, Fabio Canepa<sup>4</sup>, Valentino Laquintana<sup>3</sup>, Elisabetta Fanizza<sup>3</sup>, Marinella Striccoli<sup>1</sup>, Annalisa Cutrignelli<sup>3</sup>, Angela Lopedota<sup>3</sup>, Letizia Porcelli<sup>2</sup>, Amalia Azzariti<sup>2</sup>, Massimo Franco<sup>3</sup>, Maria Lucia Curri<sup>1</sup>, and Nunzio Denora<sup>3,\*</sup>

<sup>1</sup> Istituto per i Processi Chimico-Fisici-CNR UOS Bari, Italy

<sup>2</sup> Istituto Tumori IRCCS Giovanni Paolo II, Italy

<sup>3</sup> Università degli Studi di Bari Aldo Moro, Italy

<sup>4</sup> Università di Genova, Italy

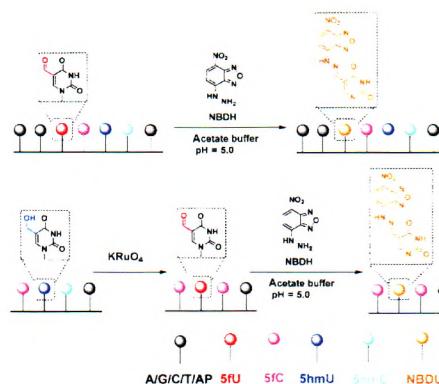

This paper reports on the fabrication of novel magnetic nanoformulations using polyethylene glycol modified phospholipid micelles loaded with colloidal superparamagnetic iron oxide nanoparticles and sorafenib. The obtained magnetic nanovectors represent a promising candidate for magnetic targeting of a chemotherapeutic agent to tumor sites to achieve an efficacious treatment of hepatocellular carcinoma.

2431–2448

## A highly efficient fluorescence-based switch-on detection method of 5-formyluracil in DNA

Chaoxing Liu, Yuqi Chen, Yafen Wang, Fan Wu, Xiong Zhang, Wei Yang, Jiaqi Wang, Yi Chen, Zhiyong He, Guangrong Zou, Shaoru Wang, and Xiang Zhou\*

Wuhan University, China

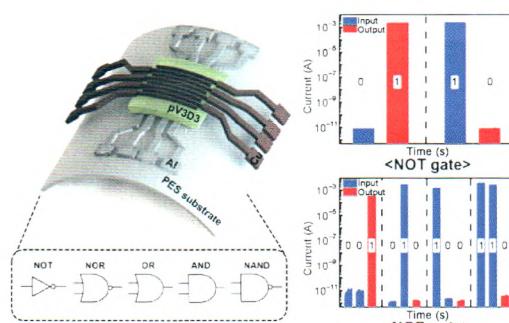

We developed a fluorescence-based switch-on method to specifically detect a natural thymidine modification, 5-formyl-2'-deoxyuridine (5fU) in single-stranded and double-stranded DNA via an addition-elimination reaction of aldehyde with hydrazine under mild conditions. This reaction is not affected by the presence of abasic sites and 5-formyl-2'-deoxycytosine, the modified cytosine counterpart of 5fU. We further developed an oxidation-labeling strategy to detect 5-hydroxymethyl-2'-deoxyuridine (5hmU) via the chemical oxidation of 5hmU to 5fU.

2449–2458

## Zero-static-power nonvolatile logic-in-memory circuits for flexible electronics

Byung Chul Jang, Sang Yoon Yang, Hyejeong Seong, Sung Kyu Kim, Junhwan Choi, Sung Gap Im, and Sung-Yool Choi\*

Korea Advanced Institute of Science and Technology (KAIST), Republic of Korea

A flexible nonvolatile logic-in-memory circuit enabling normally-off computing can be implemented using a poly(1,3,5-trivinyl-1,3,5-trimethyl cyclotrisiloxane) (pV3D3)-based memristor array. For the first time, we experimentally demonstrated our implementation of MAGIC-NOT and -NOR gates during multiple cycles and even under bent conditions. Other functions, such as OR, AND, NAND, and a half adder, are also realized within the crossbar array.

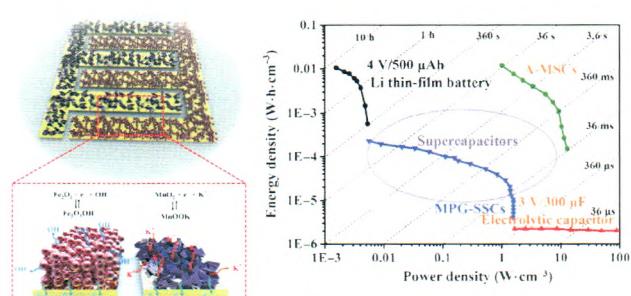

2459–2470

## Capacitance and voltage matching between $\text{MnO}_2$ nanoflake cathode and $\text{Fe}_2\text{O}_3$ nanoparticle anode for high-performance asymmetric micro-supercapacitors

Zehua Liu<sup>1</sup>, Xiaocong Tian<sup>1</sup>, Xu Xu<sup>1,\*</sup>, Liang He<sup>1</sup>, Mengyu Yan<sup>1</sup>, Chunhua Han<sup>1</sup>, Yan Li<sup>1</sup>, Wei Yang<sup>1</sup>, and Liqiang Mai<sup>1,2,\*</sup>

<sup>1</sup> Wuhan University of Technology, China

<sup>2</sup> University of California, Berkeley, USA

Planar asymmetric micro-supercapacitors (A-MSCs) are designed and fabricated by a facile and controllable microfabrication process with  $\text{MnO}_2$  and  $\text{Fe}_2\text{O}_3$  employed as the cathodic and anodic materials, respectively. By matching the voltage and capacitance of  $\text{MnO}_2$  and  $\text{Fe}_2\text{O}_3$ , the A-MSCs show high capacitance, high energy density, and wide operation voltage range.

2471–2481

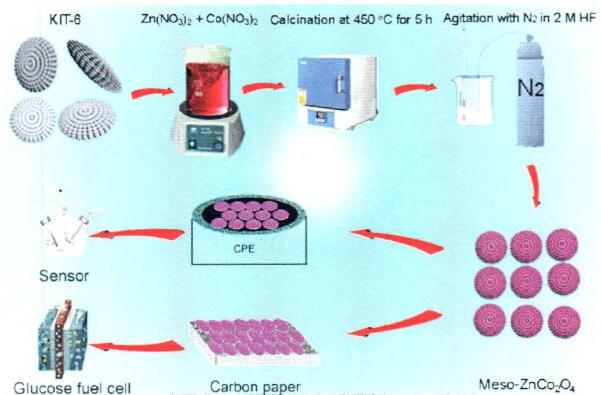

**Uniform ordered mesoporous  $ZnCo_2O_4$  nanospheres for super-sensitive enzyme-free  $H_2O_2$  biosensing and glucose biofuel cell applications**

Shiqiang Cui<sup>1</sup>, Li Li<sup>1</sup>, Yaping Ding<sup>1,\*</sup>, Jiangjiang Zhang<sup>1</sup>, Qingsheng Wu<sup>2</sup>, and Zongqian Hu<sup>3,\*</sup>

<sup>1</sup> Shanghai University, China

<sup>2</sup> Tongji University, China

<sup>3</sup> Beijing Institute of Radiation Medicine, China

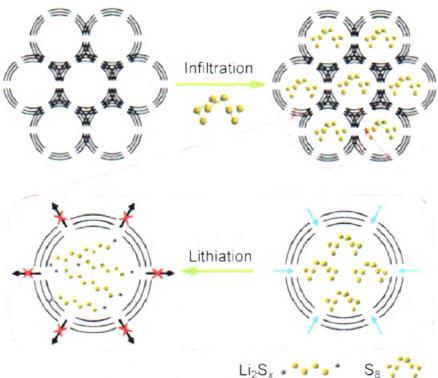

Mesoporous ZnCo<sub>2</sub>O<sub>4</sub> nanospheres were first used in super-sensitive H<sub>2</sub>O<sub>2</sub> biosensing and glucose biofuel cells.

2482–2494

**Three-dimensionally ordered, ultrathin graphitic-carbon frameworks with cage-like mesoporosity for highly stable Li-S batteries**

Huijuan Yu, Hanwen Li, Shouyi Yuan, Yuchi Yang, Jiahui Zheng, Jianhua Hu, Dong Yang\*, Yonggang Wang\*, and Angang Dong\*

Fudan University, China

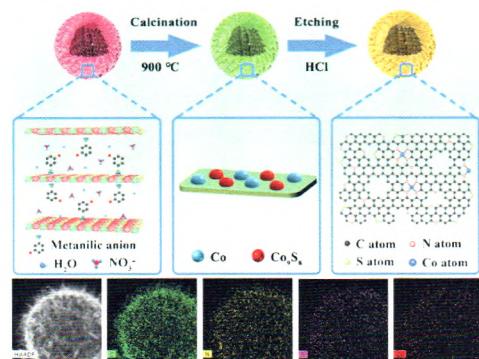

Three-dimensionally ordered, ultrathin graphitic-carbon frameworks with unique cage-like mesoporosity, derived from self-assembled Fe<sub>3</sub>O<sub>4</sub> nanoparticle superlattices, were successfully utilized as a sulfur host for high-performance lithium-sulfur batteries with high specific capacity and exceptional cycling stability.

2495–2507

**A Co-N/C hollow-sphere electrocatalyst derived from a metanilic CoAl layered double hydroxide for the oxygen reduction reaction, and its active sites in various pH media**

Jun Wang, Liqun Li, Xu Chen, Yanluo Lu, Wensheng Yang\*, and Xue Duan

Beijing University of Chemical Technology, China

Porous Co-N/C hollow spheres were successfully prepared by carbonization of metanilic anions in the confined space between the layers of cobalt-aluminum layered double hydroxides. These Co-N<sub>x</sub> catalysts exhibited remarkably high electrocatalytic activity and durability for the oxygen reduction reaction at different pH levels. The Co-N<sub>x</sub> sites act as the oxygen reduction reaction (ORR) active sites in acidic and neutral solutions, but have a negligible effect on ORR activity in alkaline conditions.

2508–2518

### Deriving phosphorus atomic chains from few-layer black phosphorus

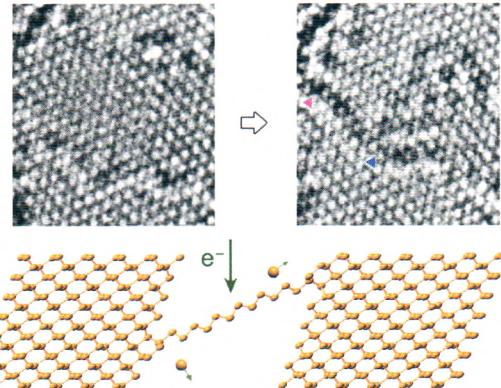

Zhangru Xiao<sup>1</sup>, Jingsi Qiao<sup>2</sup>, Wanglin Lu<sup>1</sup>, Guojun Ye<sup>3,4</sup>, Xianhui Chen<sup>3,4</sup>, Ze Zhang<sup>1</sup>, Wei Ji<sup>2,\*</sup>, Jixue Li<sup>1,\*</sup>, and Chuanhong Jin<sup>1,\*</sup>

<sup>1</sup> Zhejiang University, China

<sup>2</sup> Renmin University of China, China

<sup>3</sup> University of Science and Technology of China, China

<sup>4</sup> Nanjing University, China

Phosphorus atomic chains were obtained by *in situ* sublimation of few-layer black phosphorus.

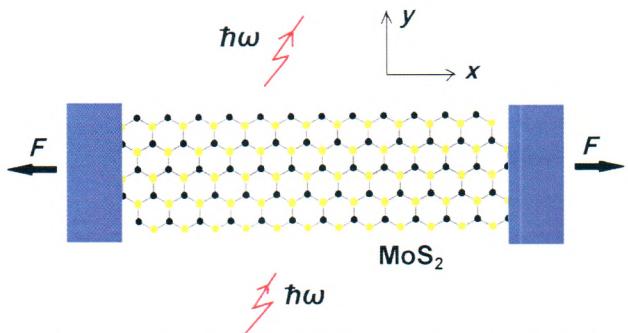

## 2519–2526

### Controlling the luminescence of monolayer MoS<sub>2</sub> based on the piezoelectric effect

Lijie Li<sup>1,\*</sup> and Yan Zhang<sup>2,\*</sup>

<sup>1</sup> Swansea University, UK

<sup>2</sup> University of Electronic Science and Technology of China, China

A theoretical analysis of the stimulated emission of monolayer MoS<sub>2</sub>, taking into consideration the piezoelectric effect, has been conducted using quantum mechanics. It is observed that the extra piezoelectric charges induced by the applied mechanical forces increase the overall charge density of MoS<sub>2</sub>, subsequently enhancing the emission intensity.

## 2527–2534

### Direct identification of monolayer rhenium diselenide by an individual diffraction pattern

Zhen Fei<sup>1</sup>, Bo Wang<sup>2</sup>, Ching-Hwa Ho<sup>3</sup>, Fang Lin<sup>4</sup>, Jun Yuan<sup>1,5</sup>, Ze Zhang<sup>1</sup>, and Chuanhong Jin<sup>1,\*</sup>

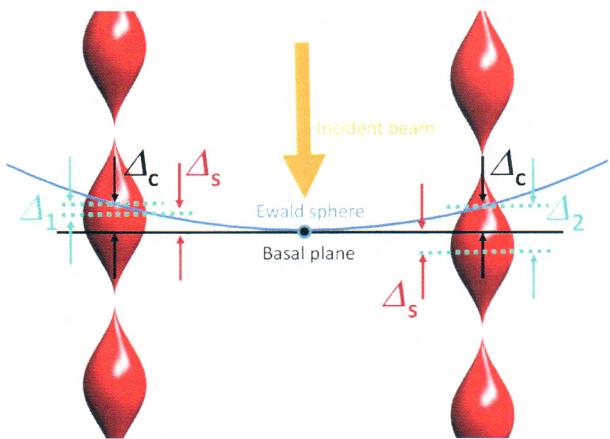

<sup>1</sup> Zhejiang University, China

<sup>2</sup> Lanzhou University, China

<sup>3</sup> Taiwan University of Science and Technology, Taipei 106, Taiwan, China

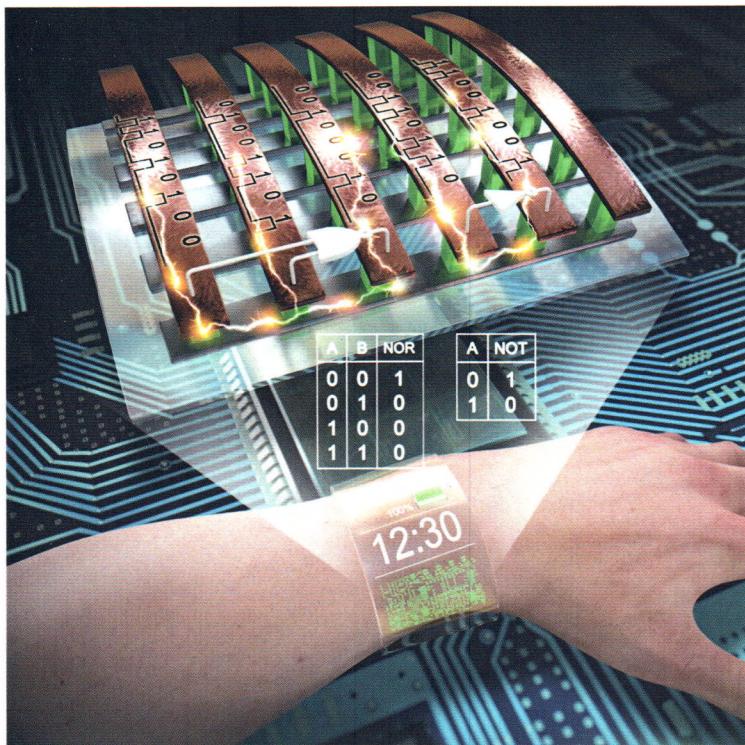

<sup>4</sup> South China Agricultural University, China

<sup>5</sup> University of York, UK

An individual diffraction pattern was used to identify monolayer rhenium diselenide and its vertical orientation.
