On Development of Coal Market and Coal Trade in China

SONG Lei

Low-carbon economy, which is low energy consumption and low pollution, becomes a new trend for the global economy. Coal market, which is an effective way to promote development of low-carbon economy and reduce emission, develops quickly and has become a new industry. This paper makes an analysis on the components of international coal trade market, on different kinds of coal market mechanism and on the development of China's coal market.

Institutional Analysis on Sustainable Supply of Rural Energy for Livelihood

ZHANG Jian-bin

Rural energy is an important part of China's energy strategy. The sustainable supply of rural energy for livelihood has much to do with increasing farmers' income, developing rural economy, improving rural living quality, bettering ecological environment and promoting recycled usage of rural energy, so we must have a deep study of it. This paper analyzes the factors affecting its supply and comes up with institutional choice for it.

Improving Living Conditions of Migrant Workers according to Requirement of Building Harmonious Society

ZONG Cheng-feng, QI Ai-lan, LI Hua

Building socialist harmonious society is a new task China faces in the period of deepening reform and promoting development and is a focus people pay attention to. At present, living conditions of migrant workers are not so satisfying, which is a negative factor in building harmonious society. According to the requirement of building harmonious society, China must set up and improve social support system, standardize wage management, establish organization of migrant workers and keep on improving their living conditions.

World Building Industry under Financial Crisis and Countermeasures of China

SHEN Ya-jun

Building industry is one of supporting industries in every country in the world. The financial crisis exerts great effects on world economy, including building industry. This paper makes an analysis on the influence of the financial crisis on world building industry and China's building industry, has a study of the measures taken by China in dealing with the crisis and comes up with some ideas for sustainable development of China's building industry.

International Comparison of Models of Specialized Farmers' Cooperatives and its Enlightenment

HONG Lin

Specialized farmers' cooperatives play an important role in promoting agricultural development, increasing farmers' income and solving other rural problems. After analyzing the experiences and the common features in developed countries like USA, Japan and European countries, the author holds the idea that we should maintain the sustainable development of specialized farmers' cooperatives by improving institutional system, expanding operation scale, promoting industrial upgrading and other measures.
