CONTENTS

Standardization and Quality Supervision
Compilation of assessment report on regional Soil and water conservation in Shandong province ZHANG Lin ZHANG Miao(1) Discussion on Technical code for groundwater control in building and municipal engineering SHANG Xuwen SHANG Yinsheng(3) Inspection and Testing
Residual stress measurement and analysis of steel bifurcated pipe in hydropower station GUAN Lei YU Pengxiang et al. (6) Experimental study on optimization of temperature control and crack prevention measures for mass concrete of spillway SUN Juanjuan ZHANG Bing(9)
Laboratory simulation study on anti-clogging performance of pervious concrete
Determination and test of dynamic early warning index of mountain torrents based on Xinanjiang Model CHEN Xuantong(22) Informazation
Application analysis of UAV aerial photography technology in river chief system of Shandong province
Improvement and application of dynamic monitoring model of soil and water loss in western Liaoning province ZHAO Ye(32) Design of water resources satellite mobile communication system based on 5G network
Study on water resource allocation strategy of Tianshui city
Study on water resources allocation of Shihezi city Based on the three red lines
Construction of management and operation mechanism of rural drinking water safety project in Lingcheng district of Dezhou city MA Zhenbin MA Xiaoli et al. (46)
Study on optimization of internal control system of government procurement in hydrological system under new situation
● Theory Study Discussion on application of virtual vertical velocity time difference method in discharge calculation of Benxi area
Discussion on application of virtual vertical velocity time unference method in discharge calculation of Benxi area ZHANG Feng(53)
Design of stochastic runoff model for ecological operation of reservoir resources
Quantitative analysis of influencing factors of sediment change of Qingyang river in recent 50 years
Current situation and measures of small and medium sized rivers in Shandong province during the 13th Five Year Plan period XING Huilin TIAN Xi et al. (80)
Spatiotemporal characteristics of phytoplankton and its relationship with environmental factors in Jiaotang lake
Modeling of flat vertical gate sluice based on Revit platform and C # technology CHEN Leilei ZUO Weilong et al. (88) Stress deformation and safety stability analysis of spillway of CFRD body
Numerical calculation analysis of design scheme for reconstruction of the water diversion canal from the Yellow River to Qingdao city PANG Zheng SUI Xin et al. (99)
Research on rainstorm and flood in plain reserve based on Mike software
• Engineering Practice
Quality control process analysis of hollow hole blasting construction of a water conveyance tunnel LI Dafeng (112) Design of flap gate and artificial wetland in Pichai river treatment project
Application of underground channel in urban drainage and flood prevention project
Discussion and effect analysis of comprehensive treatment of river closure in new urban area
Comparison and selection of design schemes and analysis of rigid protection layout of Wanghe river embankment project
Operation planning of Xili hydropower station considering power consumption and flood control demand KONG Jiehui(134) Habitat design for elk based on wetland ecological environment restoration
Study on reinforcement measures of Fengge revetment dike in Northwest Liaoning Province
Application of cement soil mixing pile in foundation treatment of Liangzhai sluice LI Yangyang ZOU Fujian et al. (146) Applicability of permanent magnet motor in large low-head pump of water resources project LI Lingyu(149)
Study on layout scheme of desilting piles in Duyinggou river channel of Hanjiang district CHEN Changze GU Yang et al. (153) Analysis of optimization design of the first layer filter material of a large reservoir abroad LU Zhinan WANG Xingyun et al. (157)
Application of variable section bottom plate in large aperture movable weir
Slope treatment design for excavation of joint intake of Momoke water resources project
Construction technology of impervious wall and curtain grouting in Shibangou reservoir project
Design and construction method of river revetment reinforcement in Wuzhouyong upgrading project CHENG Yaowei(183)

《长江保护法》宣传挂图

为了深入贯彻《长江保护法》,落实新发展理念,构建新发展格局,实现长江流域科学、有序、绿色、高质量发展,水利部政策法规司组织编制了《用法治力量守护好长江母亲河——<中华人民共和国长江保护法>宣传挂图》(共4张),由中国水利水电出版社有限公司于近期编辑出版。

《长江保护法》把保护和修复生态环境摆在压倒性位置,为长江母亲河永葆生机活力、中华民族永续发展提供了法治保障;对长江经济带高质量发展具有重要的引领和促进作用。《长江保护法》是中国特色社会主义法制建设的重大实践,也是长江流域保护和治理发展史上的一座里程碑。挂图介绍了《长江保护法》实施的重要意义、基本内容、适用范围以及在法律和制度层面的创新等,重点阐释了涉水条目相关内容。
