OIL GEOPHYSICAL PROSPECTING

Vol.55 Supplement 2020

CONTENTS

ABSTRACTS (I)

ACQUISITION TECHNIQUE

Wide frequency and wide azimuth 3D seismic acquisition in TJ area, Northeast Sichuan Basin PAN Jiazhi, et al (1)
Research and application of real-time QC on marine towed cable acquisition WANG Zengbo, et al (9)
The quality control of navigation and positioning in OBN seismic exploration LIU Dangwei, et al (15)

PROCESSING TECHNIQUE

Research and application of the processing method for Carboniferous low-frequency signals, Junggar Basin TUO Junjun, et al (20)
The improved seismic data regularization method based on matching pursuit theory LING Yue, et al (25)

MIGRATION AND IMAGING

The velocity model of converted wave VTI pre-stack time migration and its application in complex zones YANG Zhe, et al (33)
Research on high precision modeling and imaging with dual-complexity conditions: Taking the Kulongshan mountainous area of Jiuquan Basin as an example XIAO Mingtu, et al (41)
The velocity-depth modeling method of special lithologic bodies ZHANG Tao, et al (49)
Processing workflow for improving shallow seismic image quality on GeoEast platform: A case study on Shaximiao Formation in central Sichuan Basin GAN Dayong, et al (56)

COMPREHENSIVE RESEARCH

High precision prediction and identification of high temperature and high pressure gas reservoir in Yinggehai Basin LIU Wei, et al (64)
Key technology and effect of prediction of tight sandstone gas based on seismic data WANG Guanmei, et al (72)
Predicting deep reservoirs with "2W1H" seismic data LI Hailiang, et al (80)
Permeability prediction of coal strata in block LB, Qinshui Basin CHEN Longwei, et al (85)
Application of offshore 3.5D seismic survey for oilfield development at high water cut and high recovery stage LI Xisheng, et al (92)

GEO-SOFTWARE TECHNIQUE

Research and implementation of geophysical cloud computing environment SUN Xiaoping, et al (98)
