Cover: The cartoon image shows CD146 is a retention signal that promotes foam cell formation and traps them within the atherosclerotic plaques. See page 352-372 by Yongting Luo *et al.* for details.

A proposed model for an integrated partition network for m^6A -modified transcripts mediated by YTHDFs in the cytosol. See page 315-328 by Hailing Shi *et al.* for details.

Schematic representation of PKM2-mediated Bcl2 stabilization and apoptosis resistance. PKM2 translocates to the mitochondria under oxidative stress, where it interacts with and phosphorylates Bcl2 at T69. See page 329-351 by Ji Liang *et al.* for details.
