Cover: A new type of membrane contact, the ERGIC–ERES contact, was identified as an essential structure for generating membrane precursors of the autophagosome. Here we employ Moonlight in the Lotus Pond to indicate the scenario where the lotus and the receptacle resemble the ERGIC and ERES, respectively. See page 119–138 by Shulin Li et al. for details.

The overall structure of the intact HflK–HflC–FtsH (KCF) complex. See page 176–189 by Chengying Ma et al. for details.

A working model illustrates that mesolimbic $D1^{NAc-VM}$ and $D1^{NAc-VP}$ pathways cooperatively control dopamine balance and reward-aversion state. See page 139–156 by Zhiyuan Liu et al. for details.
